1 Summary

1.1 This report tests the ability of development typologies in Wandsworth to accommodate policies in the emerging Wandsworth Local Plan Partial Review alongside prevailing rates of Community Infrastructure Levy ('CIL') in the Council's adopted Charging Schedule (subject to indexation). The Council adopted its Local Plan in July 2023. The adopted Plan includes a 50% strategic affordable housing target within Policy LP23, with a tenure mix of 50% low-cost rented housing and 50% shared ownership or other intermediate housing, with the adopted Local Plan policy referring directly to the London Plan 'Fast Track' route which allows the use of a 35% affordable housing threshold on privately owned land. Within Wandsworth, there is a significant need for affordable housing and especially for social rented housing, which is currently not reflected within the recently adopted Local Plan. The Council is therefore seeking to require a different approach through a Partial Review of its Local Plan, including:

- removing the ability for applicants to apply the 35% fast track route with the application of an increased threshold;
- reviewing the tenure mix and seeking require a 70%/30% tenure mix in favour of social rent;
- introducing an affordable housing contribution on sites of below 10 units; and
- assessing the opportunities to seek affordable housing contributions from other housing types, including student housing.

1.2 Between 23 October and 4 December 2023, the Council undertook a Regulation 18 consultation on a Partial Review of the Local Plan which sought views on the potential changes to policy to increase the level of affordable housing, delivered with a particular emphasis on social rented accommodation.

1.3 The study takes account of the impact of the Council's planning requirements, in line with the requirements of the National Planning Policy Framework ('NPPF'); the National Planning Practice Guidance ('PPG'), the RICS Guidance Note 'Assessing v*iability in Planning under the National Planning Policy Framework for England (2021)*' and the Local Housing Delivery Group guidance '*Viability Testing Local Plans: Advice for planning practitioners*'.

1.4 Although the partial review is focused on changes to the affordable housing policy (LP23), we have also considered other policies which may impact on the delivery of the Council's strategic 50% affordable housing target.

Methodology

1.5 The study methodology compares the residual land values of a range of development typologies reflecting the types of developments expected to come forward in the Borough over the life of the emerging Local Plan. The appraisals compare the residual land values generated by those developments (with both the adopted tenure mix and the emerging tenure mix alongside other adopted policy requirements) to a range of benchmark land values to reflect the existing value of land prior to redevelopment. If a development incorporating the Council's emerging policy requirements and CIL generates a higher residual land value than the benchmark land value, then it can be judged that the site is viable and deliverable. Following the adoption of policies, developers will need to reflect policy requirements in their bids for sites, in line with requirements set out in the Mayor of London's supplementary planning guidance on '*Affordable Housing and Viability*'.

1.6 The study utilises the residual land value method of calculating the value of each development. This method is used by developers when determining how much to bid for land and involves calculating the value of the completed scheme and deducting development costs (construction, fees, finance, sustainability requirements and CIL) and developer's profit. The residual amount is the sum left after these costs have been deducted from the value of the development and guides a developer in determining an appropriate offer price for the site.

1.7 The housing and commercial property markets are inherently cyclical and the Council is testing the viability of potential development sites at a time when the market has experienced a period of volatility following the coronavirus pandemic in 2020/21. Forecasts for future house price growth point to growth in mainstream London housing markets, although this growth is expected to be muted in the short term as a result of high interest rates, which are expected to fall by the end of 2024. We have allowed for this medium term growth over the plan period by running a sensitivity analysis which applies growth to sales values and inflation on costs to provide an indication of the extent of improvement to viability that might result. The assumed growth rates for this sensitivity analysis are outlined in Section 4.

1.8 This sensitivity analysis is indicative only, but is intended to assist the Council in understanding the viability of potential development sites on a high level basis, both in today's terms but also in the future. In any complex urban area such as Wandsworth, differences between sites in terms of capacity, existing use value, residential and commercial values and infrastructure costs will mean that there may not be a precise correlation between the outputs of this study and scheme-specific viability when applications are submitted. Inputs to scheme-specific appraisals submitted with applications will need to be justified by reference to comparable and other supporting evidence relevant to the particular site and scheme at the time of the application.

Key findings

1.9 The key findings of the study are as follows:

- Wandsworth has an adopted Local Plan Policy (LP23) which includes a 50% affordable housing strategic target, but refers directly to the application of the 35% threshold within the London Plan's Fast Track Route on sites in private ownership. The Council is seeking to increase this threshold. The results of this Study do not point directly to a percentage which is viable across all the site typologies within the borough. Given the diversity of development types across a borough such as Wandsworth, a small number of development typologies will always find it challenging to deliver any level of affordable housing due to high existing use values. However, due to this relationship between scheme value and existing use value, these types of development would be highly unlikely to come forwards for residential development as the returns from existing uses would outweigh the benefits of redevelopment. That said, the outputs of our appraisals indicate that a majority of development typologies we have tested are able to support 40% to 45% affordable housing with a tenure mix of 70% social rent and 30%intermediate. Given that sites unable to achieve these percentages would be a minority of development typologies likely to come forward, a target seeking 40% to 45% affordable housing would align with the aspiration of the NPPF for policies to viable in a majority of cases without the need to undertake significant volumes of viability testing at the development management stage.

- The Council's partial review will bring Wandsworth's policy requirement into line with most other London boroughs which already have targets at 70% social rent / 30% intermediate.

- Our appraisals indicate that the change to tenure mix will have limited impacts on the viable percentage of affordable housing in most development scenarios. In situations where there is an impact, this is likely to be modest, with the viable level of affordable housing falling by no more than 5%.

- Our appraisals indicate that the most viable scenarios will occur where sites with the lowest benchmark land values are brought forward for development. Clearly, this is not something that the Council can really address through policy, as this is almost entirely dependent on the actions taken by individual landowners. In particular, the types of sites that actually come forward for development over the plan period will be determined by landowners' decision making on retention of existing uses versus redevelopment. There is little the Council can do to encourage the 'right' types of sites to come forward, other than regular dialogue with landowners and providing appropriate pre-application support through development management.

- There is, however, always a balance to be struck between maximising policy objectives and the returns sought by landowners. If owners have options to bring sites forward for uses other than residential (or residential-led mixed use), then the value of alternative uses will also be a consideration.

- Zonal approaches to affordable housing targets: some councils which operate more of a fixed or 'quota' approach to affordable housing obligations have set (or have considered setting) zonal approaches to affordable housing to reflect different circumstances within their areas. This is typically more appropriate for district councils with fairly homogenous development typologies, the only variation being achievable sales values.

- The difficulty of such an approach in any London Borough (including Wandsworth) is that there is variability not only in achievable sales values, but also type of development and benchmark land value. Significant variations in benchmark land value can mean that development proposals can be viable with fully policy requirements in the lowest value areas and, conversely, schemes may struggle to meet policy requirements in the higher value areas.

- In urban areas, there are also practical difficulties associated with defining appropriate boundaries for the different zones as sub-markets are rarely neatly defined, unless significant physical barriers exist (such as railways or major highways). This would inevitably result in challenges from owners on the boundaries of sites zones, seeking to argue for adjustments so that their sites are moved into a zone with lower affordable housing requirements.

- A further consideration is how a zonal approach in an individual London Borough would conform with the requirements of the London Plan. In particular, it would be required to be in general conformity with the Fast Track threshold approach, which implies fairly limited local discretion on affordable housing targets.

- To date, other London Boroughs have opted for single strategic affordable housing targets (as has Wandsworth), primarily for the reasons set out in the previous paragraphs. Similarly, the various iterations of the London Plan have always only set a single London-wide strategic affordable housing target, despite the significant variation in sales values across the capital.

- We have tested the viability of development typologies providing fewer than 10 units and the outputs of our appraisals indicate that a contribution equivalent to 10% to 20% affordable housing would be viable in most cases. However, a small number of typologies are not viable with any affordable housing contribution, so a flexible approach will need to be incorporated into any emerging policy to enable these sites in these circumstances to come forward without a contribution.

- Our testing of purpose built student housing indicates that developments will be viable against all the benchmark land values at 50% affordable housing and are therefore able to support an additional affordable housing contribution equivalent to the Council's policy aspirations.

- **Impact of other policies on affordable housing delivery:** clearly the adopted Local Plan incorporates a range of policies which collectively impact on the residual land values generated by developments. In cases where new development generates a significant surplus above existing use value, the cumulative impact of these policies can be accommodated. However, there is variability in existing use value and in some cases, the uplift generated by new development is more limited and not all policy requirements can be accommodated in full.

- Affordable housing requirements take up the vast majority of the uplift above existing use value, so other policies have a relatively limited impact on the percentages of affordable housing that can be secured. Our testing indicates that where scheme viability is marginal, switching off affordable workspace requirements, and reducing net zero carbon requirements will only have a limited positive impact on affordable housing delivery (in the region of 10%).

2 Introduction

2.1 The Council adopted a new Local Plan in July 2023 and is now undertaking a partial review. The partial review does not seek to change the vast majority of policies. The Council undertook a Regulation 18 engagement exercise between 23 October and 4 December 203 indicating that the partial review will focus on Policy LP23 (affordable housing). The Council has therefore commissioned this study to consider the viability of:

- removing the ability for applicants to apply the 35% fast track route with the application of an increased threshold;
- reviewing the tenure mix and seeking require a 70%/30% tenure mix in favour of social rent;
- introducing an affordable housing contribution on sites of below 10 units; and
- assessing the opportunities to seek affordable housing contributions from other housing types, including student housing.

2.2 The aim of the study is to assess at high level the viability of development typologies representing the types of sites that are expected to come forward over the life of the Plan to test the impact of emerging policies. With regards to affordable housing, the study seeks to establish the maximum level of affordable housing that can be accommodated as part of an increased affordable housing threshold without significantly impacting the Council's ability to deliver its London Plan housing requirement. In addition, the study considers how other sources of affordable housing can contribute to the delivery of the Council's overall strategic housing target of 50% affordable housing, including small sites and purpose built student accommodation. In terms of methodology, we adopted standard residual valuation approaches to test the viability of development typologies and identified strategic development sites, with particular reference to the impact on viability of the Council's emerging planning policies alongside adopted rates of CIL. However, due to the extent and range of financial variables involved in residual valuations, they can only ever serve as a guide. Individual site characteristics (which are unique), mean that the conclusions may need to be moderated by a level of flexibility in application of policy requirements at the development management stage.

2.3 The purpose of this viability study is to assist the Council in understanding changes to the capacity of schemes to absorb emerging policy requirements. The study will form part of the Council's evidence base for its Local Plan review. The Study therefore provides an evidence base to show that the requirements set out within the NPPF, CIL regulations and the PPG are satisfied.

2.4 As an area wide study this assessment makes overall judgements as to viability of development within the London Borough of Wandsworth and does not account for individual site circumstances which can only be established when work on detailed planning applications is undertaken. The assessment should not be relied upon for individual site applications. However, an element of judgement has been applied within this study with regard to the individual characteristics of the sites tested. The schemes tested on these sites are based on assessments of likely development capacity on the sites and clearly this may differ from the quantum of development in actual planning applications that will come forward.

2.5 This position is recognised within Section 2 of the Local Housing Delivery Group guidance[1], which identifies the purpose and role of viability assessments within plan-making. This identifies that: *"The role of the test is not to give a precise answer as to the viability of every development likely to take place during the plan period. No assessment could realistically provide this level of detail. Some site-specific tests are still likely to be required at the development management stage. Rather, it is to provide high level assurance that the policies within the plan are set in a way that is compatible with the likely economic viability of development needed to deliver the plan".*

[1] Although this document was published prior to the draft NPPF and NPPG, it remains relevant for testing local plans. The approaches to testing advocated by the LHDG guidance are consistent with those in the draft PPG.

Economic and housing market context

2.6 Since early 2020, the global economy has been subject to a degree of turbulence arising from the consequences of the Covid-19 pandemic; subsequent supply chain and labour market issues; and steep increases in energy prices resulting from Russia's invasion of Ukraine. In addition to these global issues, the UK economy has also been adversely affected by its departure from the European Union and the resulting impact on trade and tourism, as well as the previous government's September 2022 'Fiscal Event'. The combined effect of these issues resulted in a sharp increase in inflation to 10.7% in October 2022. In response, the Bank of England ('BoE') increased its base rate from 0.1% in March 2020 to 5.25% in September 2023 and in May 2024, inflation fell to 2.3%.

2.7 Despite the impact of these events, the UK housing market outperformed expectations between 2020 and mid 2022 and has subsequently remained resilient despite increasing costs of borrowing.

2.8 In its June 2024 House Price Index release, Nationwide reported that UK house prices increased by 0.2% month-on-month in June, after having increased by 0.4% month-on-month in May 2024 and falling by 0.4% month-on-month in April 2024. As a result, the annual rate of change increased to 1.5% from 1.3% in May. Commenting on these changes, Nationwide's Chief Economist, Robert Gardener, noted that "while earnings growth has been much stronger than house price growth in recent years, this hasn't been enough to offset the impact of higher mortgage rates, which are still well above the record lows prevailing in 2021 in the wake of the pandemic". He notes that house prices are now circa 3% below the all time highs recorded in the summer of 2022, after taking account of seasonal effects.

2.9 Nationwide is not forecasting significant growth in 2024 and indicates that significant change is unlikely until interest rates start to fall and affordability improves; "housing market activity has been broadly flat over the last year with the total number of transactions down by 15% compared with 2019 levels. Transactions involving a mortgage are down even more (nearly 25%), reflecting the impact of higher borrowing costs".

2.10 Halifax report a slightly less optimistic picture in its June 2024 release, with a month-on-month fall of -0.2% and annual growth of 1.6% (unchanged from the previous month).

2.11 Commenting on the modest month-on-month fall, Amanda Bryden (Head of Mortgages, Halifax Mortgages) observed that the continued stability in house prices – rising by just 0.4% so far this year – reflects a market that remains subdued, though overall activity has been recovering. For now it's the shortage of available properties, rather than demand from buyers, that continues to underpin higher prices".

2.12 Halifax points to ongoing affordability constraints for both first time buyers and existing mortgage holders who need to refinance at the end of fixed term deals. Providing the Bank of England reduces the base rate in the short term, Halifax expects prices to rise modestly over the remainder of 2024.

2.13 In their May 2024 Housing Market Update, Savills reflect improvements in market sentiment in response to falling mortgage rates, which has triggered an increase in demand from potential buyers.

2.14 Savills note that "greater demand will be unlocked by a drop in mortgage rates, with all eyes on the Bank of England and an anticipated base rate cut which Oxford Economics expect in August". Savills now expect that UK house prices will increase by 2.5% in 2024.

2.15 Forecasts for house price growth indicate that values for the UK as a whole are expected to increase over the next five years. Savills forecast an increase of 21.6% across the UK as a whole over the period 2024 to 2028 (up from 17.9% in their November forecast). They forecast lower cumulative growth of 18.2% over the same period in south-east England (up from 16.7% in their November forecast) and 14.2% in London (up from 13.9% in their November 2023 forecast). The other major agents report similar rates of cumulative growth over the same period.

Local Housing Market Context

2.16 House prices in the London Borough of Wandsworth have followed recent national trends, with values increasing rapidly between the beginning to 2014 and August 2017, and then remaining broadly flat until April 2024, as shown in Figure 2.16.1. In August 2017, average sales values were £633,826 and in April 2024, average values were £620,731 (2% lower). Sales volumes fell below historic levels in the first half of 2020 due to the Coronavirus pandemic, but have since recovered (see Figure 2.16.2), although somewhat volatile during the period after the first coronavirus lockdown. There was a significant increase in sales volumes in June 2021 as purchasers completed sales prior to the ending of the Stamp Duty holiday introduced by the government following the earlier closure in the market during the first lockdown. In subsequent months, sales volumes have returned to normal levels (varying in a range from circa 300 to 500 units per month), but there has been a steep decline in volumes since October 2023.

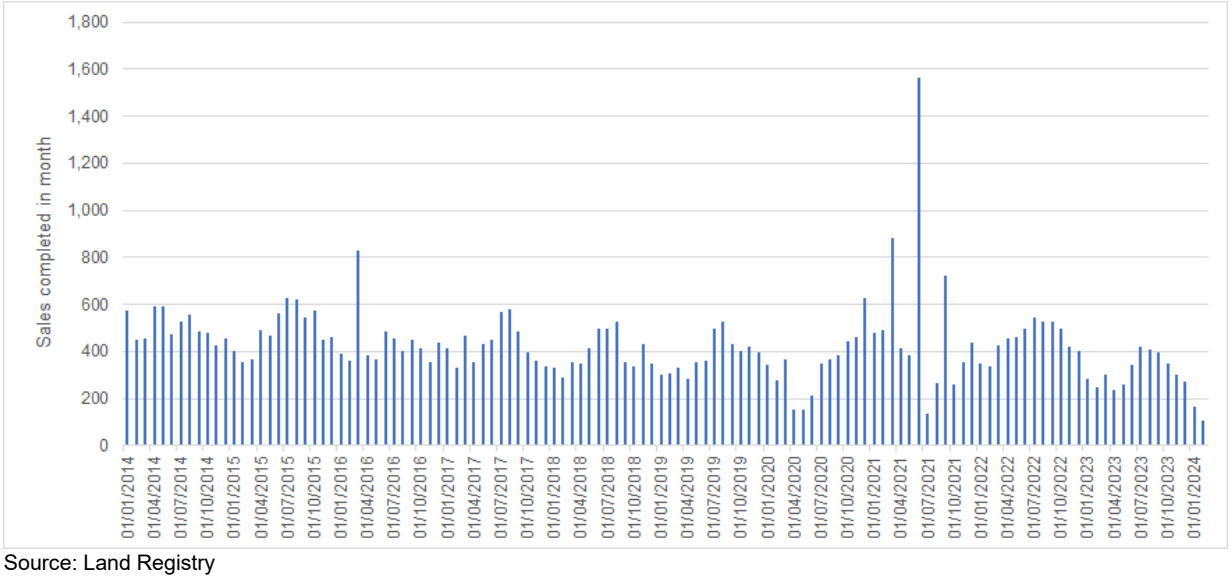
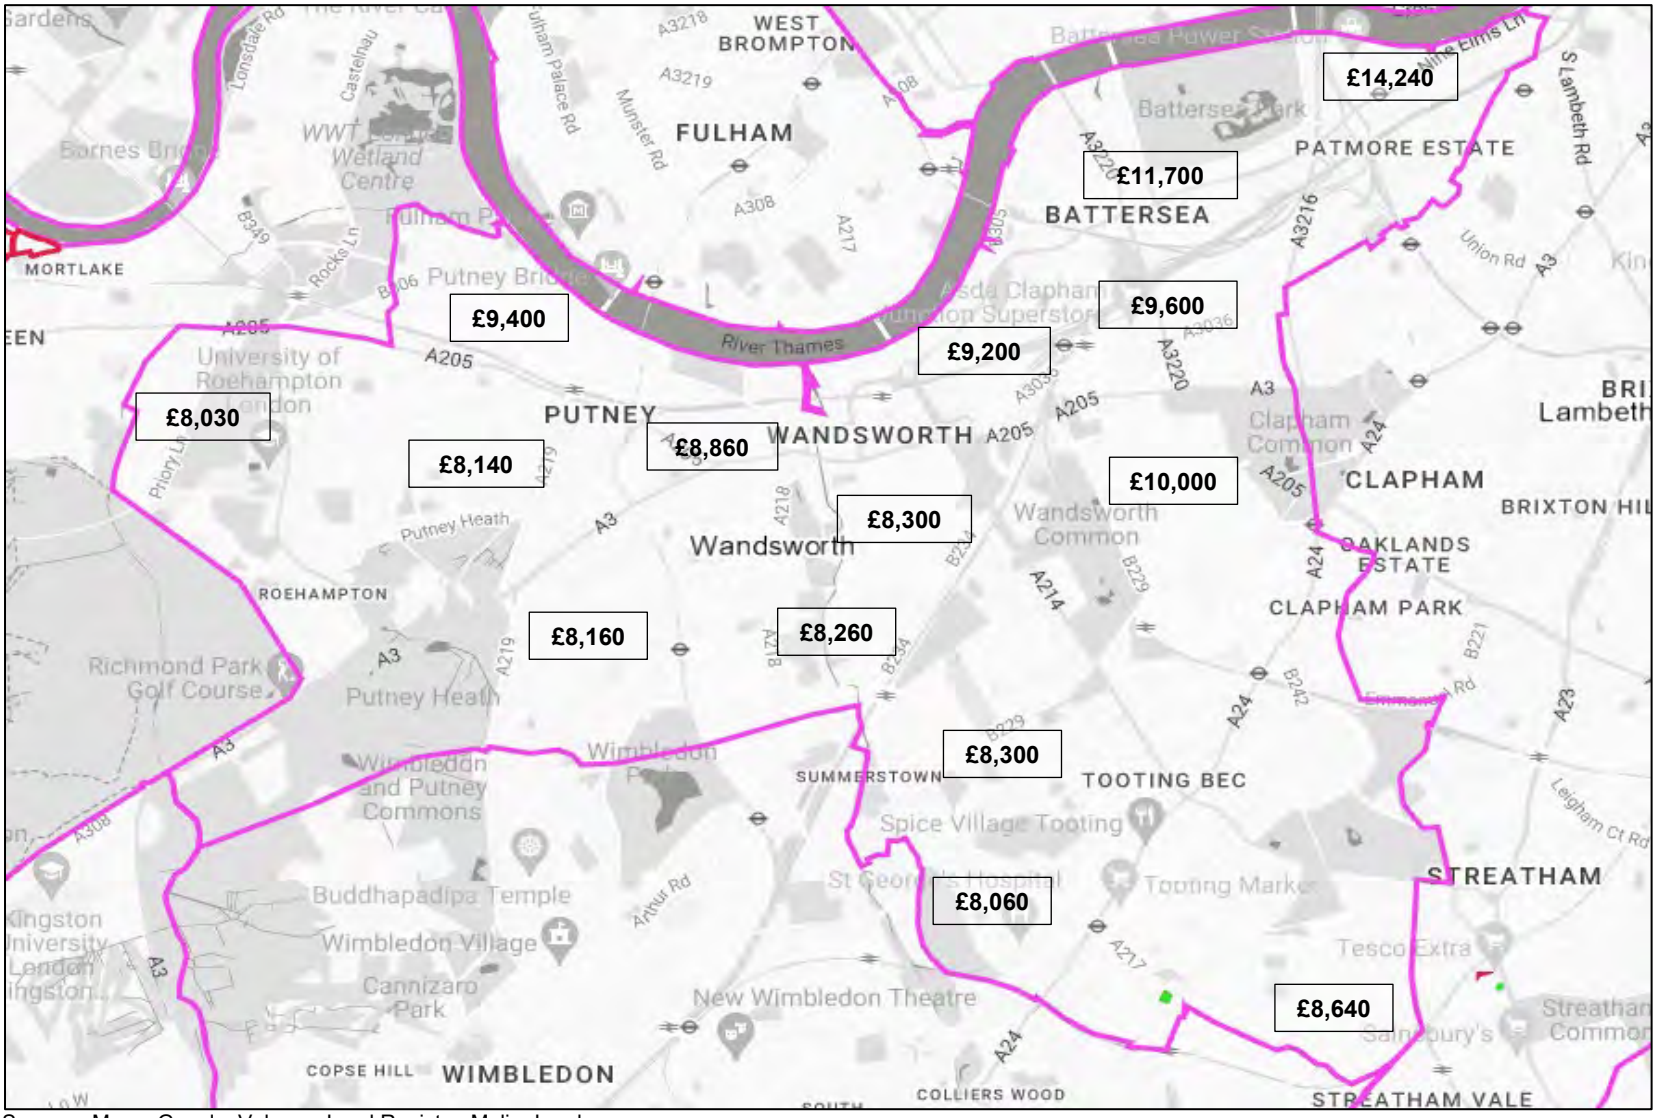
Source: Land Registry

Figure 2.16.2: Sales volumes in Wandsworth (sales per month)



Source: Land Registry

Figure 2.16.1: Sales values in Wandsworth (approx. £s per square metre)



Sources: Map – Google; Values – Land Registry; Molior London

2.17 The future trajectory of house prices is currently uncertain, although Savills' most recent housing market forecast issued in May 2024 is that values in 'mainstream' London markets are expected to increase by 2% in 2024; 2% in 2025; 2.5%Q in 2026; 3.5% in 2027 and 3.0% in 2028, equating to cumulative growth of 14.2% over the period 2024-2028.

In common with other Boroughs in London, there are variations in sales values between different parts of Wandsworth, as shown in Figure 2.18.1[2]. The highest values are achieved in the Nine Elms and Battersea areas in the north of the Borough (circa £14,240 per square metre) and around Clapham Common (circa £10,000 per square metre). Values in other riverside locations to the west in Wandsworth Town and Putney are slightly lower at circa £9,400 per square metre). Elsewhere in the Borough, values typically in a range from £8,000 to £8,500 per square metre

Pricing on key developments

2.18 We have also sourced marketing prices for key developments in the Borough from the Molior London database. It should be noted that these are marketing (asking) prices and there will inevitably be a degree of discounting to these prices (typically 5% to 10%):

- Battersea Power Station Phase 3 (Prospect Place): average marketing prices of £19,052 per square metre;
- Prince of Wales Drive: average marketing prices of £14,761 per square metre;
- Nine Elms Parkside: average marketing prices of £15,736 per square metre;
- Riverside Quarter, Phase 6B, Osiers Road: average marketing price of £11,600 per square metre;
- Vision Point, Yelverton Road: average marketing prices of £10,600 per square metre;
- One Clapham: average marketing price of £10,161 per square metre;
- King George's Gate, Earlsfield: average marketing price of £10,010 per square metre;
- Atheldene Centre Phase 1, Garratt Lane: average marketing price of £9,451 per square metre.

Private rented sector market context

2.19 The proportion of the UK population living in privately renting housing has more than doubled between 1990 and 2023. In 1990, 9.3% of the population were living in privately rented homes and this increased to 19.1% in 2023. This increase largely results from affordability issues for households who would most likely have preferred to owner occupy. Over the period 2000 to 2023, the proportion of households owner occupying has fallen from 70.6% to under 64.8% in 2023. These trends are set to continue in the context of a significant disparity between average household incomes and the amounts required to purchase a residential property in the capital, although intergenerational transfers of equity will also play a key role in levels of owner occupation.

2.20 Perceived softening of the housing for sale market has prompted some developers to seek bulk sales to PRS operators, with significant flows of investment capital into the sector[3]. Investment yields have remained stable in the zones 2 to 4 London market at circa 4%[4]. PRS housing as an asset class is still emerging and valuation portfolios and development opportunities is difficult in the context of lack of data. As the market matures, more information will become available, facilitating more sophisticated approaches to valuing and appraising PRS developments.

[2] Some of the price points in Figure 2.15.1 are for schemes in neighbouring boroughs close to the border with Wandsworth

[3] Knight Frank 'Multihousing 2022' estimates that capital committed to build to rent housing in the UK has increased from £35 billion in 2019 to over £56 billion in 2022, with a further increase to £102 billion forecast by 2028.

[4] Knight Frank Prime Residential Yield Guide June 2024 indicates yields of 3.9% for Zone 1 prime; 4.0% for Zone 2 prime and 4.15% for zones 3-4 prime.

2.21 The PRS market is still immature and as a consequence there is little data available on management costs and returns that would assist potential entrants into the market. However, viability assessments of schemes brought forward to date confirm that profit margins are lower than build for sale on the basis that a developer will sell all the PRS units in a single transaction to an investor/operator. The income stream is therefore akin to a commercial investment where a 15% profit on GDV is typically sought.

2.22 A reduced profit margin helps to compensate (to some degree) for the slightly lower capital values derived from a discounted cashflow model of a PRS operator. PRS units typically transact at discounts of circa 10% to 15% of market value on the basis of build to sell. However, forward funding arrangements will help to reduce finance costs during the build period which offsets the reduction in market value to some degree.

2.23 On larger developments, PRS can help to diversify the scheme so that the developer is less reliant on build to sell units. Building a range of tenures will enable developers to continue to develop schemes through the economic cycle, with varying proportions of units being provided for sale and rent, depending on levels of demand from individual purchasers. However, demand for build for rent products will also be affected by the health of the economy generally, with starting and future rent levels more acutely linked to changes in incomes of potential tenants.

National Policy Context

The National Planning Policy Framework

2.24 In February 2019, the government published a revised NPPF, with subsequent updates in 2021 and 2023, and revised PPG, with subsequent updates in May and September 2019.

2.25 Paragraph 34 of the NPPF states that "*Plans should set out the contributions expected from development. This should include setting out the levels and types of affordable housing provision required, along with other infrastructure (such as that needed for education, health, transport, flood and water management, green and digital infrastructure). Such policies should not undermine the deliverability of the plan*".

2.26 Paragraph 58 of the NPPF suggests that "*Where up-to-date policies have set out the contributions expected from development, planning applications that comply with them should be assumed to be viable. It is up to the applicant to demonstrate whether particular circumstances justify the need for a viability assessment at the application stage. The weight to be given to a viability assessment is a matter for the decision maker, having regard to all the circumstances in the case, including whether the plan and the viability evidence underpinning it is up to date, and any change in site circumstances since the plan was brought into force. All viability assessments, including any undertaken at the plan-making stage, should reflect the recommended approach in national planning guidance, including standardised inputs, and should be made publicly available*".

2.27 In London and other major cities, the fine grain pattern of types of development and varying existing use values make it impossible to realistically test a sufficient number of typologies to reflect every conceivable scheme that might come forward over the plan period. Both the Council's adopted Local Plan policy and London Plan policy are applied 'subject to viability', having regards to site-specific circumstances. This enables schemes that cannot provide as much as the relevant policy target for affordable housing to still come forward rather than being sterilised by a fixed or 'quota' based approach to affordable housing.

2.28 The 2019 PPG indicates that viability testing of plans should be based on existing use value plus a landowner premium. The revised PPG also expresses a preference for plan makers to test the viability of planning obligations and affordable housing requirements at the plan making stage in the anticipation that this may reduce the need for viability testing developments at the development management stage. Local authorities have, of course, been testing the viability of their plan policies

since the first NPPF was adopted[5], but have adopted policies based on the most viable outcome of their testing, recognising that some schemes coming forward will not meet the targets. This approach maximises delivery, as there is flexibility for schemes to come forward at levels of obligations that are lower than the target, if a proven viability case is made. The risk of the approach in the NPPF is that policy targets will inevitably be driven down to reflect the least viable outcome; schemes that could have delivered more would not do so.

CIL Policy Context

2.29 As of April 2015 (or the adoption of a CIL Charging Schedule by a charging authority, whichever was the sooner), the S106/planning obligations system' i.e. the use of 'pooled' S106 obligations, was limited to a maximum of five S106 agreements. However, changes in the CIL regulations in September 2019 removed the pooling restrictions, giving charging authorities a degree of flexibility in how they use Section 106 and CIL. The adoption of a CIL charging schedule is discretionary for a charging authority.

2.30 It is worth noting that some site specific S106 obligations remain available for negotiation, however these are restricted to site specific mitigation that meet the three tests set out at Regulation 122 of the CIL Regulations (as amended) and at paragraph 57 of the NPPF, and to the provision of affordable housing.

2.31 The CIL regulations state that in setting a charge, local authorities must strike "*an appropriate balance*" between revenue maximisation on the one hand and the potentially adverse impact upon the viability of development on the other. The regulations also state that local authorities should take account of other sources of available funding for infrastructure when setting CIL rates.

2.32 From September 2019 onwards, the previous two stage consultation was amended to require a single consultation with stakeholders. Following consultation, a charging schedule must be submitted for independent examination.

2.33 The payment of CIL becomes mandatory on all new buildings and extensions to buildings with a gross internal floorspace over 100 square metres (or any new dwelling, regardless of floor area) once a charging schedule has been adopted. The CIL regulations allow a number of reliefs and exemptions from CIL. Firstly, affordable housing and buildings with other charitable uses (if a material interest in the land is owned by the charity and the development is to be used wholly or mainly for its charitable purpose) are subject to relief. Secondly, local authorities may, if they choose, elect to offer an exemption on proven viability grounds. A local authority wishing to offer exceptional circumstances relief in its area must first give notice publicly of its intention to do so. The local authority can then consider claims for relief on chargeable developments from landowners on a case by case basis. In each case, an independent expert with suitable qualifications and experience must be appointed by the claimant with the agreement of the local authority to assess whether paying the full CIL charge would have an unacceptable impact on the development's economic viability.

2.34 The exemption would be available for 12 months, after which time viability of the scheme concerned would need to be reviewed if the scheme has not commenced. To be eligible for exemption, regulation 55 states that the Applicant must enter into a Section 106 agreement; and that the Authority must be satisfied that granting relief would not constitute state aid. It should be noted, however, that CIL cannot simply be negotiated away or the local authority decide not to charge CIL.

2.35 CIL Regulation 40 includes a vacancy period test for calculating CIL liability so that vacant floorspace can be offset in certain circumstances. That is where a building that contains a part which has not been in lawful use for a continuous period of at least six months within the last three years, ending on the day planning permission first permits the chargeable development, the floorspace may not be offset.

[5] And also following the publication of Planning Policy Statement 3 which required that LPAs set affordable housing policies on the basis of both proven need *and* viability. The need for viability testing was established following the quashing in 2008 of Blyth Valley's Core Strategy, which based its 30% affordable housing target on need alone, with no evidence on the viability of the policy.

2.36 The CIL regulations enable local authorities to set differential rates (including zero rates) for different zones within which development would take place and also for different types of development. The CIL Guidance set out in the PPG (paragraph 022 Reference ID: 25-022-20230104) clarifies that CIL Regulation 13 permits charging authorities to *"apply differential rates in a flexible way, to help ensure the viability of development is not put at risk [including] in relation to geographical zones within the charging authority's boundary; types of development; and/or scales of development".* Charging Authorities taking this approach need to ensure that different rates are justified by a comparative assessment of the economic viability of those categories of development. Furthermore, the PPG clarifies that the definition of "*use*" for this purpose is not tied to the classes of development in the Town and Country Planning Act (Use Classes) Order 1987 (as amended), although that Order does provide "*a useful reference point"*[6]. The PPG also sets out (paragraph 024 Reference ID: 25-024-20190901) that charging authorities may also set differential rates in relation to, scale of development i.e. by reference to either floor area or the number of units or dwellings.

2.37 The 2010 CIL regulations set out clear timescales for payment of CIL, which are varied according to the size of the payment, which by implication is linked to the size of the scheme. The 2011 amendments to the regulations allowed charging authorities to set their own timescales for the payment of CIL under regulation 69B if they choose to do so. This is an important issue that the Council will need to consider, as the timing of payment of CIL can have an impact on an Applicant's cashflow (the earlier the payment of CIL, the more interest the Applicant will bear before the development is completed and sold).

2.38 Regulation 73 enables charging authorities to secure physical infrastructure on a development site, or land, in lieu (or 'in kind') of a Developer's CIL liability. The PPG (paragraph 133) notes that *"there may be circumstances where the charging authority and the person liable for the levy will wish land and/or infrastructure to be provided, instead of money, to satisfy a charge arising from the levy*". The PPG goes on to note that the charging authority can enter into agreements with developers to receive infrastructure as payment of a CIL liability.

2.39 Revised regulations came into effect on 1 September 2019 which introduced the following changes:

- Consultation requirements to be amended to remove the current two stage consultation process and replace this with a single consultation.
- Removal of the pooling restrictions contained within Regulation 123.
- Charging authorities are no longer required to publish a Regulation 123 list.
- Changes to calculations of chargeable amounts in different cases, including where granting of amended scheme under Section 73 leads to an increased or decreased CIL liability.
- Removal of provisions which resulted in reliefs being lost if a commencement notice was not served before a developer starts a development. A surcharge will apply in future but the relief will not be lost.
- Introduction of 'carry-over' provisions for a development which is amended by a Section 73 permission, providing the amount of relief does not change.
- Charging authorities are required to publish an annual infrastructure funding statement, setting out how much CIL has been collected and what it was spent on. Similar provisions to be introduced for Section 106 funds.
- Charging authorities are required to publish annual CIL rate summaries showing the rates after indexation.

[6] Difficulties may emerge, for example, with regards to Class E, which includes very different uses which are interchangeable, such as offices and retail. Applying CIL rates to use classes *(rather than intended uses of development)* in these circumstances may be inconsistent with viability evidence.

Mayoral CIL

2.40 The Borough is located within Mayoral CIL Zone 1, which attracts a rate of £80 per square metre before indexation and £92.36 per square metre after indexation. The Nine Elms area falls within the 'Central London MCIL 2 charging area for office, retail and hotel use' where rates of £185 per square metre, £165 per square metre and £140 per square metre apply respectively (before indexation), or £213.59, £190.50 and £161.64 per square metre respectively (after indexation). Future receipts from the Mayoral CIL will be used to contribute towards strategic transport infrastructure, including Crossrail 2 (a north-east to south-west line) to relieve pressure on existing transport networks.

Borough CIL

2.41 The Council approved its CIL Charging Schedule on 11 July 2012 and it came into effect on 1 November 2012. Table 2.41.1 below summarises the prevailing and indexed rates of CIL, using the Annual CIL Rate Summary 2024 (published in December 2023). For residential developments, the borough is divided into four zones (Nine Elms Residential Area A; Nine Elms Residential Area B; Roehampton Charging Area; and All other areas). In these areas, residential rates are £575, £265, £0 and £250 per square metre respectively (before indexation). Offices and retail uses (now falling within Class E) are charged at £100 per square metre (before indexation) in the Nine Elms areas and nil elsewhere. All other development has a nil charge. The adopted and indexed rates are summarised in Table 2.41.1.

Table 2.41.1: CIL rates per net additional square metre in the Charging Schedule

Use / zone	Adopted rate	Indexed rate
Residential (Nine Elms A)	£575	£982.40
Residential (Nine Elms B)	£265	£452.76
Residential (Roehampton)	£0	£0
Residential (All other areas)	£250	£427.13
Offices and retail (Nine Elms A and B)	£100	£170.85
All other uses	£0	£0

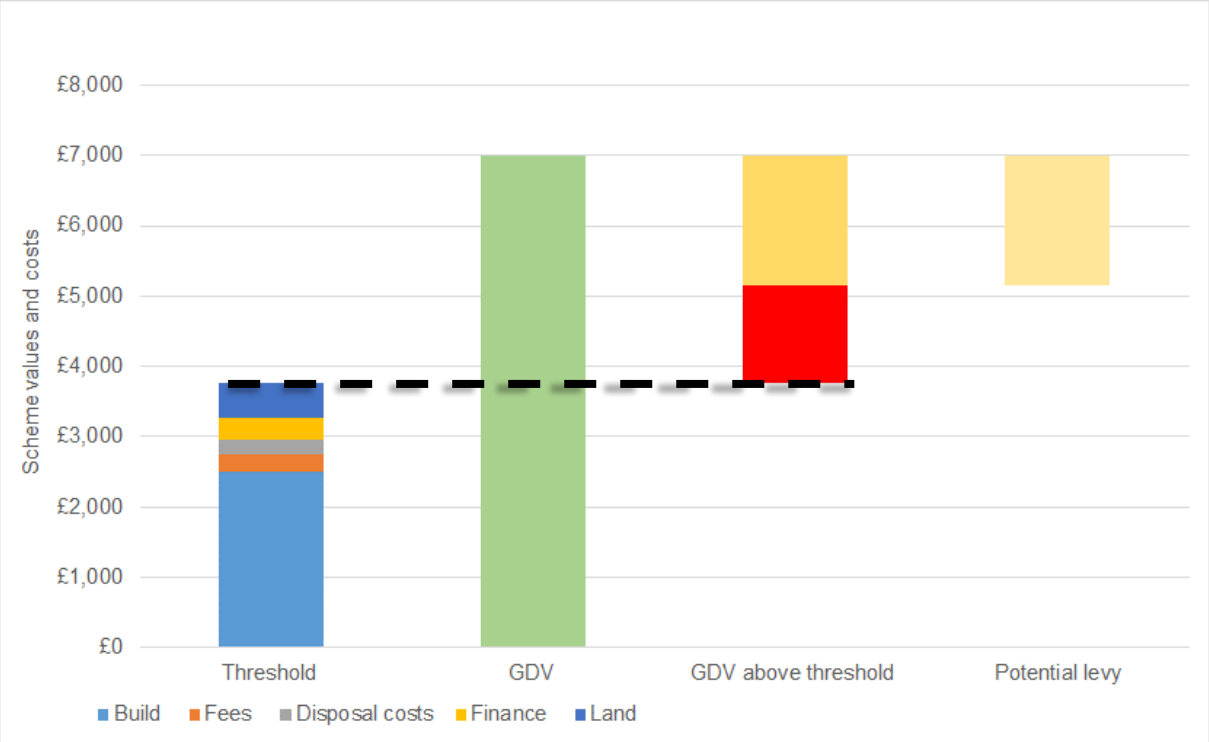
Infrastructure Levy

2.42 The Levelling Up and Regeneration Act 2024 ('LURA') includes provisions for a new 'Infrastructure Levy' ('IL') which – if adopted - would replace section 106 obligations (including affordable housing) and CIL. The LURA does not provide details on how the IL will work, but a technical consultation document in early 2023 provided more detail on how the previous government envisaged that it would operate. The consultation indicated that IL would be piloted through a 'test and learn' process prior to wider implementation.

2.43 In essence, the IL will be structured so that developers pay a percentage of GDV as a levy, which they will use to fund infrastructure. Authorities will be able to use some of the levy to fund the delivery of affordable housing by requiring developers to provide affordable units in lieu of paying the levy.

2.44 The technical consultation indicates that the IL will be determined by individual LPAs and can vary between types of development and types of site. In essence, the costs of development are calculated using a typology approach (including land cost, construction, fees, finance and marketing costs). These costs are reflected by the first bar on the left in Figure 2.44.1. The amount of GDV above these costs is then calculated (in Figure 2.44.1, the GDV is represented by the green bar and the surplus above the threshold is shown by the yellow and red bar). The 'surplus' GDV is then divided between Developer profit (represented by the red portion of the bar) and the remainder is the indicative IL.

Figure 2.44.1: Calculating IL



2.45 LPAs would be expected to run a number of typologies to test the likely viability of a range of developments and set an IL percentage of GDV tariff, or range of tariffs.

2.46 The previous government had indicated that it expected the IL to deliver the same or greater levels of benefits (in terms of affordable housing and contributions towards infrastructure) than the existing system. This proposition is problematic. The existing system secures contributions from developers by setting relatively ambitious targets and securing the maximum viable level of benefits on a site-specific basis. The delivery of a borough average of, say, 30% affordable is the product of a series of negotiations on individual schemes, ranging from 0% up to 50% affordable housing.

2.47 Systems for securing contributions towards affordable housing and infrastructure can be simple, or they can optimise delivery, but it is difficult for them to achieve both objectives. As IL will be fixed, it will need to set at a level that can be viably absorbed by all schemes which will come forward in a variety of situations. In authorities where schemes are fairly uniform and sites are all greenfield, viability of development will not differ significantly from one site to the next. The same cannot be said of urban areas – each development has an almost unique set of characteristics; with varying forms of development driven by the urban grain; varying mixes of uses; hugely variable levels of abnormal costs; and existing use values that vary from site to site.

2.48 The risk of adopting a uniform tariff with no flexibility is that it will render some schemes unviable. CIL has worked in practice, as other planning requirements are negotiable. In contrast, IL has no flexibility to address site-specific circumstances.

2.49 In setting IL, local authorities will need to identify a rate (or set of rates) that all schemes within its area can viably accommodate. If the IL is set at the wrong rate or rates, the consequence is that some schemes will be rendered unviable. If an authority identifies that schemes in its area can currently provide a range of affordable housing levels of, say, 5% to 35%, the IL will need to be set at a level that is equivalent to 5% to avoid rendering a huge swathe of housing land supply unviable. The other schemes that could have delivered more than 5% will not do so and significant amounts of value will be 'left on the table'.

2.50 The lack of flexibility in the proposals will inevitably drive down levels of affordable housing delivery

towards the least viable scenario. Planning authorities in urban areas need to pilot the IL to demonstrate the adverse impact it will have on delivery, but these authorities are likely to be the most reluctant to get involved. The inevitable conclusion of these pilots will be that optimisation of benefits cannot be achieved through simplification.

2.51 The response to the technical consultation on the IL resulted in unanimously negative feedback and the government has indicated that a further consultation on the principle of IL will be issued in the near future. The previous government also accepted an amendment to the LURA which resulted in IL not being mandatory if authorities can demonstrate that it would have an adverse impact on viability in their areas. The new government elected on 4 July has indicated that it does not intend to continue the IL. It is therefore unlikely that the proposals will continue in their current form, but the government has signalled a need for ongoing improvement to the existing planning obligations system.

Fire safety regulations

2.52 In July 2023, the previous government confirmed an 18 metre height threshold above which all residential buildings are to have a second stair core. Many developers who have recently secured planning permission but who have not yet implemented these permissions are submitting Section 73 applications to vary these schemes to add second cores. This sometimes results in reductions in saleable floorspace where it is not possible to offset space lost to additional cores by either expanding the footprint of the building or adding height.

2.53 The issue has been compounded by recent increases in construction costs, which developers are typically reflecting in their financial viability assessments submitted with Section 73 applications. This is entirely appropriate of course (providing that any increases in value since the original application are also reflected), but sometimes has the effect of reducing the affordable housing below 35% unless other factors have changed to offset increased costs, such as a reduced benchmark land value.

2.54 This is in essence a short term issue that will be resolved after consented schemes have been varied to add the required additional cores. Schemes being designed after the changes to the regulations will clearly already reflect the requirements and sufficient floorspace will need to be negotiated with officers to ensure schemes are financially viable.

Local Policy context

2.55 There are numerous policy requirements that are now embedded in base build costs for schemes in London addressing London Plan requirements[7], which are mirrored in borough Local Plans (i.e. secure by design, lifetime homes, landscaping, amenity space, internal space standards, car parking, waste storage, tree preservation and protection etc). Therefore, it is unnecessary to establish the cost of all these pre-existing policy requirements, which cannot be altered by the Council's Partial Local Plan Review.

2.56 In order to assess the ability of schemes to absorb emerging plan policies, it is also necessary to factor in the pre-existing requirements in the adopted policies as well as the adopted CIL rates. The affordable housing policy is tested at various percentages, as it has a significant bearing on the viability of developments, even though it has been in place for a considerable period.

2.57 The Council adopted a new Local Plan in July 2023 and the partial review does not seek to change the vast majority of policies. The Council undertook a Regulation 18 engagement exercise between 23 October and 4 December 2023 indicating that the partial review will focus on Policy LP23 (affordable housing). The policies with specific cost implications in the adopted Local Plan are identified in Table 2.57.1 below. This includes policy LP23 on affordable housing, which this study focuses on.

[7] London Plan policy requirements were themselves viability tested in the 'London Plan Viability Study December 2017' available here: https://www.london.gov.uk/sites/default/files/london_plan_viability_study_dec_2017.pdf

Table 2.57.1: Policies with cost implications in the adopted Local Plan

<table>
<tr><th>Policy</th><th>Requirement</th><th>How policy is addressed in this Study</th></tr>
<tr><td>LP10</td><td>Responding to the Climate Crisis
Reflects London Plan requirement for major developments to achieve minimum 35% reduction in carbon emissions through on-site solutions. Non-residential buildings to achieve BREEAM ‘outstanding’.</td><td>Additional cost included in appraisals.</td></tr>
<tr><td>LP14</td><td>Air Quality, pollution and managing impacts of development
Policy refers to land contamination and the need for remediation. However, developers will need to remediate sites to appropriate standards to comply with other standards (e.g. HBF warranty) so these are not direct policy costs.</td><td>PPG on viability indicates that remediation should be reflected in BLV, so the impact for the purposes of this study is neutral.</td></tr>
<tr><td>LP17</td><td>Social and community infrastructure
Requires that developments of 10 or more units will have access to sufficient community infrastructure in neighbourhood to accommodate new residents. This policy also prevents the loss of existing social and community infrastructure.</td><td>Contributions to new community infrastructure via CIL.</td></tr>
<tr><td>LP18</td><td>Arts, culture and entertainment
A requirement to produce an Arts and Culture Action Plan</td><td>De-minimis cost, incorporated within overall professional fees allowance.</td></tr>
<tr><td>LP19</td><td>Play space
Requirement for provision of play space for children of 10 square metres per child.</td><td>Reflected within the assumptions on built area in relation to site area. Costs of laying out play space reflected in external works allowances.</td></tr>
<tr><td>LP20</td><td>New open space
Major developments expected to accommodate public open space on-site.</td><td>Reflected within assumptions on built area in relation to site area. Costs of laying out public open space reflected within external works allowances.</td></tr>
<tr><td>LP23</td><td>Affordable housing
The Council will require an affordable housing tenure split of at least 50% low-cost rent produces, with the balance provided as other intermediate products.</td><td>The partial review retains the overall strategic 50% target but seeks to vary the tenure split to 70% social rent and 30% intermediate.</td></tr>
<tr><td>LP24</td><td>Housing mix
Seeks to apply a housing mix as follows:
<table>
<tr><th>Tenure</th><th>1 bed</th><th>2 bed</th><th>3 bed</th><th>4 bed</th></tr>
<tr><td>Market housing</td><td>30-40%</td><td>30-40%</td><td>15-25%</td><td>5-10%</td></tr>
<tr><td>Rented Units</td><td>40-45%</td><td>30-35%</td><td>20-25%</td><td>5-10%</td></tr>
<tr><td>Intermediate</td><td>35-40%</td><td>40-45%</td><td>15-20%</td><td>5-10%</td></tr>
</table></td><td>Housing mix reflected in the appraisals, with a sensitivity test included for an updated housing mix.</td></tr>
</table>

Policy	Requirement	How policy is addressed in this Study
LP27	**Housing standards** Developments to comply with national space standards (as reflected in London Plan) and requirements of London Plan policies D6 and D7.	Space standards reflected in appraisals. Accessibility standards (10% of dwellings to meet Part M4(3) standard and all other dwellings to meet Part M4(2) reflected.
LP28	**Purpose built student accommodation** Reflects London Plan requirement for purpose build student accommodation to provide 35% affordable student housing (defined as rents not exceeding 50% of the available maintenance loan for undergraduate students studying in London.	Tested in the study.
LP30	**Build to rent** Applies other relevant residential policies (LP23, LP24 and LP27 to build to rent schemes)	Tested of these requirements alongside other types of residential development.
LP31	**Specialist housing for vulnerable people** Sets out requirement for new specialist and supported housing to be of high quality and provide affordable housing in line with policy LP24.	Affordable housing requirement tested in study.
LP38	**Affordable and open workspace** Requires that schemes exceeding 1,000 square metres provide at least 10% of floorspace at a rent not exceeding 80% of market rent (50% in Nine Elms area) in perpetuity.	Reflected in the appraisals.
LP39	**Local employment and training opportunities** Seeks contributions towards provision of training/apprenticeship places.	Reflected in the appraisals.
LP51	**Parking, servicing and car free development** Requires that developments are car free in areas with PTALs of 4 or more. Electric vehicle charging required where on-site car parking is provided.	Reflected in the appraisals.
LP55	**Biodiversity** Requirement for 10% biodiversity net gain, in line with statutory requirements.	Cost reflected in the appraisals.
LP57	**Urban Greening Factor** All developments to contribute towards urban greening including green roofs, green walls and nature-based sustainable drainage.	Cost of green roofs incorporated in the appraisals.
LP62	**Planning obligations** Outlines the Council's intention to secure contributions through Section 106 agreements in addition to CIL.	Reflected in the appraisals.

Development context

2.58 Wandsworth is an inner London borough extending from central London (at Vauxhall) to the edge of Richmond Park in the neighbouring borough of Richmond. The Borough's entire northern boundary is defined by the River Thames. One third of the Borough's land mass is in residential use and a quarter is open space, including heaths and commons.

2.59 The Borough has five main town centres (Balham, Clapham Junction, Putney, Tooting and Wandsworth), the Nine Elms Opportunity Area and nine local centres. The main town centres have high levels of public transport accessibility (4 or above). Elsewhere, public transport accessibility is relatively low, due to relatively low levels of railway and Underground lines in some parts of the

Borough.

2.60 The Borough's population has increased from a 320,900 in 2015 to an estimated 332,500 in 2020, with an increase to 377,300 expected by 2040. .

2.61 Wandsworth has a highly skilled resident population, with 70% of economically active people holding a degree (compared to the London-wide average of 53%). Median weekly earnings are £690 compared to a London average of £575.

2.62 The Nine Elms Opportunity Area has seen significant volumes of residential and commercial development over the past twelve years, with redevelopment of former industrial land with mixed use schemes providing circa 20,000 new residential units. The redevelopment of Battersea Power Station has resolved a significant brownfield development site with a significant heritage asset which had been vacant since its closure as an operational power station in the mid 1980s. The power station itself now accommodates a major office and retail destination, with circa 3,500 residential units distributed in the land around the power station. The rest of the Nine Elms area accommodates a range of developments and uses, including the US Embassy. Higher densities of development within the Opportunity Area were made possible by an extension of the Northern Line through Nine Elms and onwards to Battersea Power Station, funded jointly by the developers, the Council and TfL. The Council's previous policy for the Nine Elms Opportunity Area sought 15% affordable housing, which was lower than the borough-wide target at the time, on the basis that developments would be contributing towards strategic infrastructure. The adopted Local Plan now brings Nine Elms into line with the target applied elsewhere in Wandsworth.

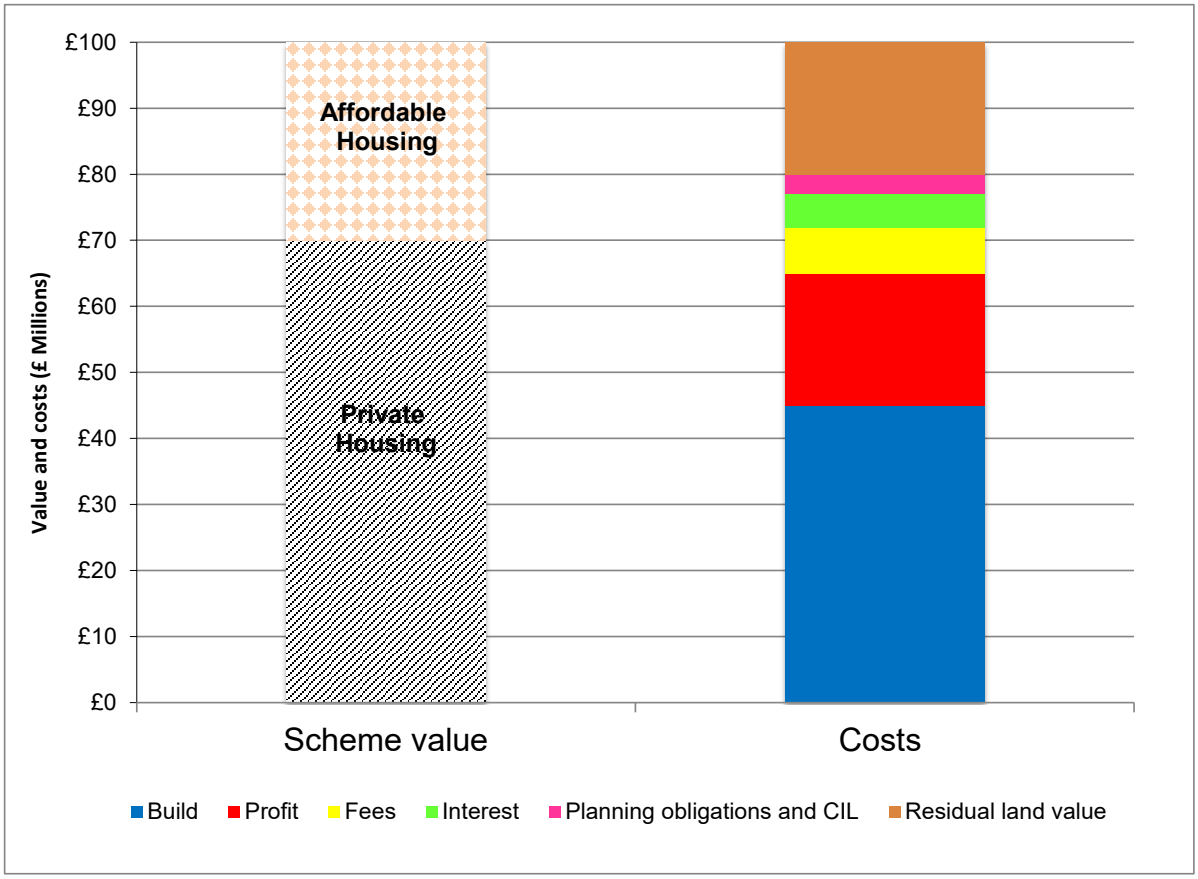
3 Methodology and appraisal approach

3.1 Our methodology follows standard development appraisal conventions, using locally-based sites and assumptions that reflect local market and planning policy circumstances. The study is therefore specific to Wandsworth and tests the Council's emerging planning policy requirements alongside adopted CIL rates.

Approach to testing development viability

3.2 Appraisal models can be summarised via the following diagram. The total scheme value is calculated, as represented by the left hand bar. This includes the sales receipts from the private housing (the hatched portion) and the payment from a Registered Provider ('RP') (the chequered portion) for the completed affordable housing units. For a commercial scheme, scheme value equates to the capital value of the rental income after allowing for rent free periods and purchaser's costs. The model then deducts the build costs, fees, interest, planning obligations, CIL and developer's profit. A 'residual' amount is left after all these costs are deducted – this is the land value that the Developer would pay to the landowner. The residual land value is represented by the brown portion of the right hand bar in the diagram.

Figure 3.2.1: Components of a residual valuation



3.3 The Residual Land Value is normally a key variable in determining whether a scheme will proceed. If a proposal generates sufficient positive land value (in excess of existing use value, discussed later), it will be implemented. If not, the proposal will not go ahead, unless there are alternative funding sources to bridge the 'gap'.

3.4 Issues with establishing key appraisal variables are summarised as follows:

- Development costs are subject to national and local monitoring and can be reasonably accurately assessed in 'normal' circumstances. In boroughs like Wandsworth, most sites will have been developed previously. These sites can sometimes encounter 'exceptional' costs such as decontamination. Such costs can be very difficult to anticipate before detailed site investigations are undertaken;
- Assumptions about development phasing, phasing of Section 106 contributions and infrastructure required to facilitate each phase of the development will affect residual values. Where the delivery of a planning obligation is deferred, the lower the real cost to the applicant (and the greater the scope for increased affordable housing and other planning obligations). This is because the interest cost is reduced if the costs are incurred later in the development cashflow; and
- While Developer's Profit has to be assumed in any appraisal, its level is closely correlated with risk. The greater the risk, the higher the profit level required by lenders. The PPG identifies a range of 15% to 20% for private housing development, with lower rates for some forms of housing such as BTR. Typically, developers and banks are targeting around 17.5 profit on value of the private housing element.

3.5 Ultimately, the landowner will make a decision on implementing a project on the basis of return and the potential for market change, and whether alternative developments might yield a higher value. The landowner's 'bottom line' will be achieving a residual land value that sufficiently exceeds 'existing use value[8]' or another appropriate benchmark to make development worthwhile. The margin above existing use value may be considerably different on individual sites, where there might be particular reasons why the premium to the landowner should be lower or higher than other sites.

3.6 Clearly, however, landowners have expectations of the value of their land which often exceed the value of the existing use. Ultimately, if landowners' *reasonable* expectations are not met, they will not voluntarily sell their land and (unless a Local Authority is prepared to use its compulsory purchase powers) some may simply hold on to their sites, in the hope that policy may change at some future point with reduced requirements. However, the communities in which development is brought forward also have reasonable expectations that development will mitigate its impact, in terms of provision of community infrastructure, which will reduce land values. It is within the scope of these expectations that developers have to formulate their offers for sites. The task of formulating an offer for a site is complicated further still during buoyant land markets, where developers have to compete with other developers to secure a site, often speculating on increases in value.

Viability benchmark

3.7 In 2019 (with re-issues in 2021 and 2023), the government published a revised NPPF, which indicates at paragraph 34 that *"Plans should set out the contributions expected from development. This should include setting out the levels and types of affordable housing provision required, along with other infrastructure (such as that needed for education, health, transport, flood and water management, green and digital infrastructure). Such policies should not undermine the deliverability of the plan".* The revised PPG indicates that for the purposes of testing viability, local authorities should have regard to existing use value of land plus a premium to incentivise release for redevelopment.

3.8 The Mayor of London's Affordable Housing and Viability SPG (August 2017) focuses on decision making in development management, rather than plan making, but indicates that benchmark land values should be based on existing use value plus a premium which should be "*fully justified based on the income generating capacity of the existing use with reference to comparable evidence on rents, which excludes hope value associated with development on the site or alternative uses*".

3.9 The Local Housing Delivery Group published guidance[9] in June 2012 which provides guidance on

[8] For the purposes of this report, existing use value is defined as the value of the site in its existing use, assuming that it remains in that use. We are not referring to the RICS Valuation Standards definition of 'Existing Use Value'.

[9] Viability Testing Local Plans: Advice for planning practitioners, Local Housing Delivery Group, Chaired by Sir John Harman, June 2012

testing viability of Local Plan policies. The guidance notes that "*consideration of an appropriate Threshold Land Value [or viability benchmark] needs to take account of the fact that future plan policy requirements will have an impact on land values and landowner expectations. Therefore, using a market value approach as the starting point carries the risk of building-in assumptions of current policy costs rather than helping to inform the potential for future policy*".

3.10 It is important to stress, therefore, that there is no single threshold land value at which land will come forward for development. The decision to bring land forward will depend on the type of owner and, in particular, whether the owner occupies the site or holds it as an asset; the strength of demand for the site's existing use in comparison to others; how offers received compare to the owner's perception of the value of the site, which in turn is influenced by prices achieved by other sites. Given the lack of a single threshold land value, it is difficult for policy makers to determine the minimum land value that sites should achieve. This will ultimately be a matter of judgement for each planning authority.

3.11 Relying upon historic transactions to inform benchmark land values is a fundamentally flawed approach, as offers for these sites will have been framed in the context of current planning policy requirements. Consequently, an exercise using these transactions as a benchmark would tell the Council nothing about the potential for sites to absorb as yet unadopted policies. Even prior to the publication of the 2019 PPG, various Local Plan inspectors and CIL examiners accepted the key point that Local Plan policies and CIL will ultimately result in a reduction in land values, so benchmarks must consider a reasonable minimum threshold which landowners will accept. For local authority areas such as Wandsworth, where the vast majority of sites are previously developed, the 'bottom line' in terms of land value will be the value of the site in its existing use.

3.12 Commentators frequently make reference to 'market testing' of benchmark land values and advocating the use of benchmarks that are based on the prices that sites have been bought and sold for. There are significant weaknesses in this approach which none of the advocates of this approach have addressed. In brief, prices paid for sites are a highly unreliable indicator of their actual value, due to the following reasons:

- Transactions are often based on bids that 'take a view' on squeezing planning policy requirements below target levels. This results in prices paid being too high to allow for policy targets to be met. If these transactions are used to 'market test' emerging Local Plan policies and/or CIL rates, the outcome would be unreliable and potentially highly misleading.

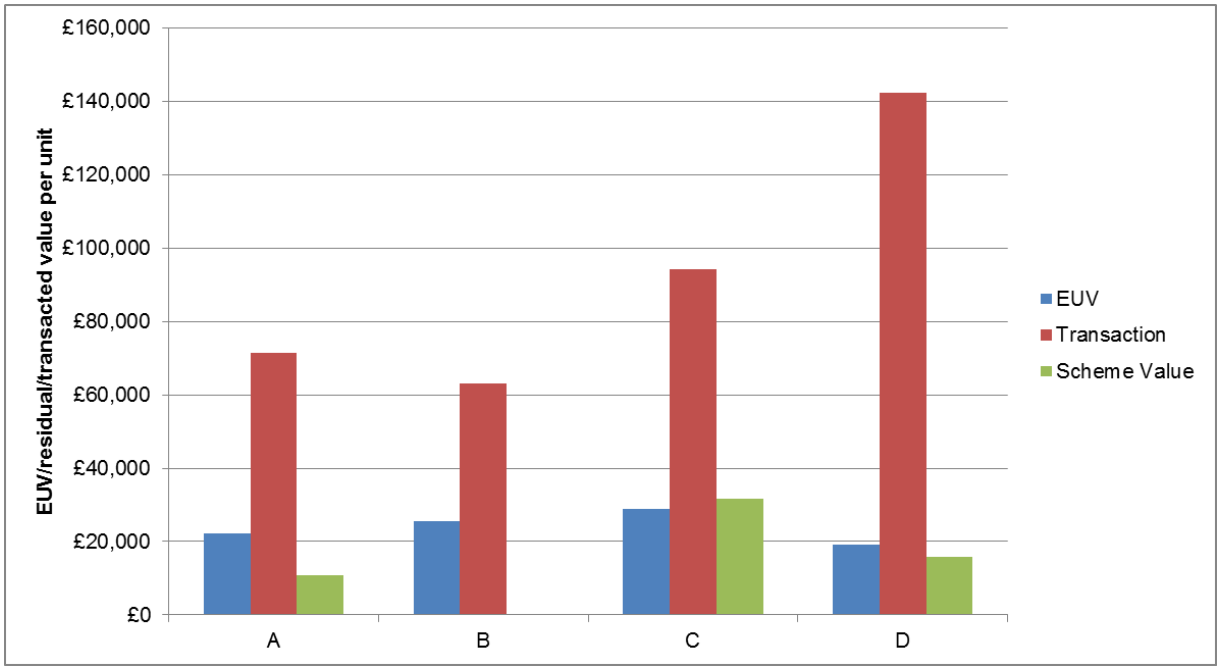
- Historic transactions of housing sites are often based on the receipt of grant funding, which is no longer available in most cases.

- There would be a need to determine whether the developer who built out the comparator sites actually achieved a profit at the equivalent level to the profit adopted in the viability testing. If the developer achieved a sub-optimal level of profit, then any benchmarking using these transactions would produce unreliable and misleading results.

- Developers often build assumptions of growth in sales values into their appraisals, which provides a higher gross development value than would actually be achieved today. Given that our appraisals are based on current values, using prices paid would result in an inconsistent comparison (i.e. current values against the developer's assumed future values). Using these transactions would produce unreliable and misleading results.

3.13 These issues are evident from a recent BNP Paribas Real Estate review of evidence submitted in viability assessments where the differences between the value ascribed to developments by applicants and the amounts the sites were purchased for by the same parties. The prices paid exceeded the value of the consented schemes by between 52% and 1,300%, as shown in Figure 3.13.1. This chart compares the residual value of four Wandsworth development proposals to the sites' existing use values and the price which the developers paid to acquire the sites (all the data is on a per unit basis).

Figure 3.13.1: Comparison of residual values to existing use value and price paid for site



3.14 For the reasons set out above, the approach of using current use values is a more reliable indicator of viability than using market values or prices paid for sites, as advocated by certain observers. Our assessment follows this approach, as set out in Section 4.

3.15 The PPG indicates that planning authorities should adopt benchmark land values based on existing use values. It then goes on to suggest that the premium above existing use value can be informed by land transactions. This would in effect simply level benchmark land values up to market value, with all the issues associated with this (as outlined above). The PPG does temper this approach by indicating that "*the landowner premium should be tested and balanced against emerging policies*" and that "*the premium should provide a reasonable incentive for a land owner to bring forward land for development while allowing a sufficient contribution to comply with policy requirements*". The guidance also stresses in several places that "price paid for land" should not be reflected in viability assessments. This would exclude use of transactional data thus addressing the issues highlighted in paragraphs 3.11 and 3.12.

4 Appraisal assumptions

4.1 We have appraised 48 development typologies across the borough, these include a range of typologies which were formulated by the Council, informed by past development types and current pipeline sites, to reflect the development expected to come forward under the new Local Plan. These typologies are broadly consistent with those used in the Council's *'Whole Plan Viability Assessment (January 2022)',* but with some additional typologies added to cover other types of development commonly found in the Council's housing trajectory, particularly small sites. The development typologies are identified in Table 4.1.1 overleaf (with further detailed information at Appendix 1). The appraisals include sufficient gross internal floorspace to accommodate the space standards and amenity standards in adopted Local Plan Policies LP27 and Policy D6 of the London Plan as well as specific public open space requirements in adopted Local Plan policies LP19 and LP20. The Council undertook some engagement on draft appraisal inputs and the responses to this are attached as Appendix 18.

Residential sales values

4.2 Residential values in the area reflect national trends in recent years but do of course vary between different sub-markets within Wandsworth, as noted in Section 2. We have considered comparable evidence of second hand and new build transactions in the borough to establish appropriate values for testing purposes. This exercise involved analysis of 3,711 transactions recorded by the Land Registry between January 2022 and April 2024 but brought up to date by reference to changes in the House Price Index from the point of sale (attached as Appendix 2). This analysis indicates that developments in the borough will attract average sales values ranging from circa £8,030 per square metre (£746 per square foot) to circa £14,240 per square metre (£1,323 per square foot), as shown in Figure 2.16.1. As noted in Section 2, the highest sales values are achieved in the Nine Elms area at the north of the Borough. Developments in the western parts of the borough (and Roehampton in particular) which have the lowest levels of public transport accessibility are lowest.

4.3 We have also tested the impact of the provision of private units as rented by discounting the market value for these units by 10%, which reflects the discount we have seen on live developments when units are provided as Private Rented Sector stock. As noted in Section 2, this discount is offset to a degree by a reduction in profit margin of circa 5%, so the net reduction in value is 5%.

4.4 As noted earlier in the report, Savills predict that sales values will increase over the medium term (i.e. the next five years). Whilst this predicted growth cannot be guaranteed, we have run a series of sensitivity analyses assuming growth in sales values accompanied by cost inflation as summarised in Table 4.4.1. While these growth scenarios are based on a number of forecasts, they cannot be guaranteed and the results which these scenarios produce must be viewed as indicative only.

Table 4.4.1: Growth scenario

Year	1 2024	2 2025	3 2026	4 2027	5 2028	6 2028 and each year thereafter
Values	2.5%	2.5%	3.0%	3.5%	4.0%	4.0%
Costs	2.0%	2.0%	2.0%	2.0%	2.0%	2.0%

Affordable housing tenure and values

4.5 The Local Plan Partial Review would require schemes capable of providing 10 or more units to provide 50% affordable housing (or a potential Fast Track percentage of 40% - 45%) with a tenure mix of 70% social rent and 30% intermediate. This is a departure from the adopted policy which seeks provision of 50% affordable housing (or 35% in some applications of the Fast Track) with a tenure mix of 50% low cost rented housing and 50% intermediate products.

4.6 For the purposes of testing potential levels of affordable housing to inform the emerging policy approach, our appraisals assume that the rented housing is let at social rents (see Table 4.6.1). This table also shows London Affordable Rents for comparison – these are not applied in the appraisals.

Table 4.1.1: Development typologies and strategic development sites tested in the study (all areas are square metre gross internal areas)

Site	Description	Site area HA	Units	Ave GIA sqm per unit	Residential floorspace	Retail	Super-market	Office	Warehouse B8	Total Gross Internal Area
1	Low density housing scheme (2 houses)	0.05	2	85	170					170
2	Low density housing scheme (4 houses)	0.10	4	85	339					339
3	Low density housing scheme (9 houses)	0.23	9	85	764					764
4	Medium density flatted sheme (5 flats)	0.03	5	85	424					424
5	Medium density flatted scheme (7 flats)	0.04	7	85	594					594
6	Medium density flatted scheme (9 flats)	0.06	9	85	764					764
7	Medium density flatted scheme (30 flats)	0.15	30	85	2,545					2,545
8	Medium density flatted scheme (75 flats)	0.38	75	85	6,363					6,363
9	Medium density flatted scheme (250 flats)	1.47	250	85	21,211					21,211
10	Medium density flatted scheme (600 flats)	2.49	600	85	50,906					50,906
11	Medium density mixed use flatted scheme (200 flats)	1.98	200	85	16,969	2,000	1,000	1,000		20,969
12	Medium density mixed use flatted scheme (400 flats)	1.95	400	85	33,938	1,200	300			35,438
13	Medium density mixed use flatted scheme (80 flats)	1.03	80	85	6,788	200		5,000	5,000	16,988
14	Intensification scheme (industrial with 9 flats)	0.29	9	85	764				4,000	4,764
15	Medium density mixed use flatted scheme (30 flats)	0.24	30	85	2,545	400				2,945
16	Medium density mixed use flatted scheme (75 flats)	0.29	75	85	6,363				2,000	8,363
17	Medium density mixed use flatted scheme (150 flats)	0.72	150	85	12,727			2,000		14,727
18	High density mixed use flatted scheme (300 flats)	0.76	300	85	25,453			5,000		30,453
19	Medium density mixed use flatted scheme (50 flats)	0.29	50	85	4,242			1,300		5,542
20	High density mixed use flatted scheme (150 flats)	0.48	150	85	12,727			5,000		17,727
21	High density mixed use flatted scheme (480 flats)	1.52	480	85	40,725			7,000		47,725
22	Medium density mixed use flatted scheme (100 flats)	0.51	100	85	8,484	2,000				10,484
23	High density mixed use flatted scheme (450 flats)	1.02	450	71	31,852				3,000	34,852
24	Medium density mixed use flatted scheme (40 flats)	0.60	40	71	2,831	3,000		700		6,531

Site	Description	Site area HA	Units	Ave GIA sqm per unit	Residential floorspace	Retail	Super-market	Office	Warehouse B8	Total Gross Internal Area
25	Medium density mixed use flatted scheme (250 flats)	2.30	250	85	21,211	650		1,600		23,461
26	Medium density mixed use flatted scheme (250 flats)	1.79	250	85	21,211	400			2,000	23,611
27	Medium density mixed use flatted scheme (140 flats)	0.60	140	85	11,878	3,000		4,000		18,878
28	Medium density mixed use flatted scheme (600 flats)	3.51	600	85	50,906	7,000	3,000		1,000	61,906
29	Medium density mixed use flatted scheme (500 flats)	2.81	500	85	42,422	800			3,500	46,722
30	Intensification scheme (industrial with 12 flats)	0.39	12	85	1,018			500	2,500	4,018
31	Medium density mixed use flatted scheme (350 flats)	2.19	350	85	29,695			7,500	15,000	52,195
32	Medium density mixed use flatted scheme (180 flats)	1.25	180	85	15,272	700	500	500		16,972
33	High density mixed use flatted scheme (500 flats)	1.42	500	85	42,422	2,000		5,500		49,922
34	Medium density mixed use flatted scheme (1750 flats)	10.63	1,750	85	148,477	12,000	3,000	3,500		166,977

36	Medium density mixed use flatted scheme (50 flats)	0.37	50	85	4,242					4,242
37	High density mixed use flatted scheme (400 flats)	1.06	400	85	33,938					33,938
38	High density mixed use flatted scheme (400 flats)	1.13	400	85	33,938	2,500	500			36,938
39	Medium density mixed use flatted scheme (100 flats)	0.50	100	85	8,484			3,000		11,484
40	High density mixed use flatted scheme (350 flats)	0.93	350	85	29,695	400		1,300		31,395
41	Purpose built student accom (high density) 100 units	0.05	100	38	3,750					3,750
42	Purpose built student accom (medium density) 100 units	0.15	100	38	3,750					3,750
43	High density retirement flatted scheme (60 flats)	0.20	60	85	5,091					5,091
44	High density retirement flatted scheme (70 flats)	0.20	70	85	5,939					5,939
45	High density retirement flatted scheme (80 flats)	0.20	80		0					0
46	Medium density extracare flatted scheme (50 flats)	0.20	50	85	4,242					4,242
47	High density extracare flatted scheme (60 flats)	0.20	60	85	5,091					5,091
48	High density extracare flatted scheme (70 flats)	0.20	70	85	5,939					5,939

Table 4.6.1: Affordable housing rents (per week)

Rent type	1 bed	2 bed	3 bed	4 bed
Social Rents	£106.59	£121.74	£139.60	£157.46
London Affordable Rent (2024/25)[10]	£201.43	£213.26	£225.11	£236.95

4.7 To establish the capital value of the rented units, we have used a discounted cashflow model which replicates the approach used by registered providers when preparing bids to acquire new housing stock. The model projects the rents over a 40 year period and deducts the estimated voids and bad debts, management costs, maintenance costs and allowances for major repairs. The model establishes the present value of the net rental income by applying a discount rate (reflecting the cost of funds and RP's risk margin), reflecting the price that can, in principle, be paid to acquire the completed units from a developer.

4.8 We value the shared ownership units by firstly establishing the unrestricted market value of each unit by reference to comparable evidence of similar units. The value of the initial equity stake sold to the purchaser (typically 25%) is the first segment of value. The purchaser will also pay a rent on the retained equity at rate not exceeding 2.75% of the retained equity. The capital value of this rent is calculated using a discounted cashflow model. The two elements (initial equity stake sold plus capital value of rental income) are added together to establish a total value.

4.9 Adopted Local Plan Policy LP24 sets out an expected housing mix in new developments in terms of numbers of bedrooms. The housing mix applied to across the affordable tenures is included in Table 4.9.1.

Table 4.9.1: Housing mix sought by adopted Local Plan Policy LP24

Tenure	1 bed	2 bed	3 bed	4 bed
Market housing	30-40%	30-40%	15-25%	5-10%
Rented Units	40-45%	30-35%	20-25%	5-10%
Intermediate affordable	35-40%	40-45%	15-20%	5-10%

4.10 In addition, the Council has provided an alternative mix, which is based on a recent housing needs assessment, which we have tested as a sensitivity analysis. This mix is summarised in Table 4.10.1.

Table 4.10.1: Alternative housing (C3) mix (sensitivity analysis)

Tenure	1 bed	2 bed	3 bed	4 bed
Market housing	5.7%	38.6%	47.1%	8.6%
Rented Units	19.6%	36.3%	31.2%	12.9%
Intermediate affordable	29.5%	70.5%	-	-

4.11 A key issue for development viability is the capital value that each tenure will generate in terms of receipt from the acquiring RPs, as this will be one of the inputs that constitutes the Gross Development Value of a development. Table 4.11.1 summarises the capital values that each tenure generate.

[10] The rents most recently published by the GLA uprated by the subsequent maximum allowable rent increased published by the Regulator of Social Housing in January 2024.

Table 4.11.1: Capital values of affordable housing (per square metre Net Internal Area)

Tenure	1 bed	2 bed	3 bed	4 bed	Blended value[11]
Social Rent	£2,530	£2,092	£1,989	£1,982	£2,090
Shared ownership[12]	£5,201	£5,201	£4,328	£3,746	£4,682

4.12 The GLA '*Affordable Homes Programme 2021-2026*' document clearly states that Registered Providers will not receive grant funding for any affordable housing provided through planning obligations on developer-led developments. Consequently, all our appraisals assume nil grant. Clearly if grant funding does become available over the plan period, it should facilitate an increase in the provision of affordable housing when developments come forward.

Rents and yields for commercial development

4.13 Our assumptions on rents and yields for the retail, office and industrial floorspace are summarised in Table 4.13.1. These assumptions are informed by 244 lettings of similar floorspace in the Borough recorded by CoStar since July 2022 (attached as Appendix 3) and we have applied the upper quartile rent in each area, reflecting higher rents achieved for newly built space. Our appraisals assume a 12-month rent-free period for all types of commercial floorspace.

Table 4.13.1: Commercial rents (£s per square metre) and yields

Commercial floorspace	Rent per square metre	Investment yield	Rent free period (months)
Retail	£485	7.00%	12
Supermarkets	£280	5.00%	6
Offices	Nine Elms: £601 Elsewhere: £479	6.50%	12
Industrial and warehousing	£280	5.00%	12

Build costs

4.14 We have sourced build costs from the RICS Building Cost Information Service (BCIS), which is based on tenders for actual schemes (see Appendix 4). It is the largest source of independently verified scheme cost data and its use for testing emerging planning policies is advocated by the PPG. Base costs (adjusted for local circumstances by reference to BICS multiplier) are as follows:

Table 4.14.1: BCIS build costs

Type of development	BCIS cost	Base cost	External works	Total (before policy costs)
Houses	810.1 Estate housing generally	£1,873	10%	£2,060
Flats – fewer than 6 storeys	816. Flats 3-5 storeys	£2,163	10%	£2,379
Flat – 6 or more storeys	816. Flats 6 storeys or above	£2.555	10%	£2,811

[11] Reflecting the housing mix in adopted Local Plan Policy LP24. The blended value for the alternative housing mix is marginally lower at £1,990 per square metre for rented housing and broadly unchanged for shared ownership due to affordability caps.

[12] Variable as these are linked to market values – the values shown here are for schemes with unrestricted market values of £8,000 per square metre. Values will vary with unrestricted market value but they will be restricted by household income affordability caps.

Type of development	BCIS cost	Base cost	External works	Total (before policy costs)
Retail	345 Shops generally	£1,892	10%	£2,081
Supermarkets	344 Supermarkets generally	£2,119	10%	£2,331
Student housing	856.2 Students' residences	£2,873	10%	£3,160
Offices	320 Offices air conditioned generally	£2,758	10%	£3,034
B2 / B8	284 Warehouses, stores	£1,126	10%	£1,239

4.15 The base costs above are increased by 10% to account for external works (including car parking spaces).

Net Zero carbon and BREEAM

4.16 The Council (together with other London boroughs) has commissioned research on the costs of achieving reductions in carbon emissions from development ('*Delivering Net Zero: An evidence study to support planning policies which deliver Net Zero Carbon developments'* (May 2023) by Levitt Bernstein, Introba, Inkling, Currie & Brown and Etude.

4.17 This research identifies additional capital costs of achieving net zero carbon development ranging from 4% to 5% for houses; 4% to 7% or low rise flats; and 3% to 5% for mid-rise flats. The study also identifies additional capital costs of 1% to 4% for offices and 4% to 7% for industrial development.

4.18 We have therefore tested a range of costs in our appraisals, reflecting the findings from the research indicating that there are various approaches to achieving net zero carbon and the cost depends on the type of buildings and which solution is used. The range is therefore as follows (these are applied to both domestic and non-domestic uses):

- Scenario 1: 3% uplift for net zero carbon;
- Scenario 2: 5% uplift for net zero carbon.

Accessibility standards

4.19 We have tested the impact of applying accessible and adaptable dwellings standards (Category 2 and Category 3) at the rates summarised in Table 4.19.1. These costs are based on the (then) MHCLG *'Housing Standards Review: Cost Impacts'* study, but converted into percentages of base construction costs (see calculations at Appendix 5) so that they can be applied to contemporary costs.

Table 4.19.1: Costs of accessibility standards (% uplift to base construction costs)

Standard	Flats	Houses
M4(2) accessible and adaptable	1.15%	0.54%
M4(3) (a) wheelchair user - adaptable	9.28%	10.77%
M4(3) (b) wheelchair user - accessible	9.47%	23.80%

4.20 Our appraisals assume that all units are constructed to meet wheelchair accessibility standards (Category 2) and that Category 3 applies to 10% of dwellings, in line with the requirement of adopted Local Plan Policy LP27. M4(3) (a) applies to market housing units and M4(3) (b) applies to affordable units.

Professional fees

4.21 In addition to base build costs, schemes will incur professional fees, covering design and valuation, highways consultants and so on. Our appraisals incorporate a 10% allowance, which is at the middle to higher end of the range for most schemes.

Development finance

4.22 Our appraisals assume that development finance can be secured at a rate of 6.5%, inclusive of arrangement and exit fees, reflective of medium funding conditions over the plan period.

Marketing costs

4.23 Our appraisals incorporate an allowance of 2.5% for marketing costs, which includes show homes and agents' fees, plus 0.25% for sales legal fees.

Mayoral CIL

4.24 The Borough is located within Mayoral CIL Zone 1, which attracts a rate of £80 per square metre before indexation and £92.36 per square metre after indexation. The Nine Elms area falls within the 'Central London MCIL 2 charging area for office, retail and hotel use' where rates of £185 per square metre, £165 per square metre and £140 per square metre apply respectively (before indexation), or £213.59, £190.50 and £161.64 per square metre respectively (after indexation). Future receipts from the Mayoral CIL will be used to contribute towards strategic transport infrastructure, including Crossrail 2 (a north-east to south-west line) to relieve pressure on existing transport networks.

Borough CIL

4.25 The Council approved its CIL Charging Schedule on 11 July 2012 and it came into effect on 1 November 2012. Table 4.25.1 below summarises the prevailing and indexed rates of CIL, using the Annual CIL Rate Summary 2024 (published in December 2023). For residential developments, the borough is divided into four zones (Nine Elms Residential Area A; Nine Elms Residential Area B; Roehampton Charging Area; and All other areas). In these areas, residential rates are £575, £265, £0 and £250 per square metre respectively (before indexation). Offices and retail uses (now falling within Class E) are charged at £100 per square metre (before indexation) in the Nine Elms areas and nil elsewhere. All other development has a nil charge. The adopted and indexed rates are summarised in Table 4.25.1.

Table 4.25.1: CIL rates per net additional square metre in the Charging Schedule

Use / zone	Adopted rate	Indexed rate
Residential (Nine Elms A)	£575	£982.40
Residential (Nine Elms B)	£265	£452.76
Residential (Roehampton)	£0	£0
Residential (All other areas)	£250	£427.13
Offices and retail (Nine Elms A and B)	£100	£170.85
All other uses	£0	£0

4.26 The amended CIL Regulations specify that if any part of an existing building is in lawful use for 6 months within the 36 months prior to the time at which planning permission first permits development, all of the existing floorspace will be deducted when determining the amount of chargeable floorspace. This is likely to be the case for many development sites in Wandsworth but not all existing floorspace will qualify. Therefore, for the purposes of our appraisals, we have assumed that there is no deduction for existing floorspace to reflect the most cautious outcome in terms of CIL liability. In practice, many developments will have existing floorspace which qualifies and the CIL liability will be reduced to an extent.

Section 106 costs

4.27 To account for residual Section 106 requirements, we have included an allowance of up to £25 per square metre for non-residential development and £2,500 per unit for residential development. This has been based on previous agreed S106 costs aligned to the Planning Obligations SPD, however it is important to note S106 costs are very site specific and the actual amounts will of course be subject to site-specific negotiations when schemes are brought forward through the development management process.

4.28 In addition to the allowances above, our appraisals include an allowance for Section 278 works of £1,000 per residential unit and £15 per square metre for commercial developments.

Workspace and affordable workspace

4.29 Adopted Local Plan Policy LP38 requires that schemes providing more than 1,000 square metres of employment floorspace should incorporate 10% affordable workspace at rents not exceeding 80% of market rent (50% of market rent in Nine Elms) in perpetuity.

4.30 Our appraisals reflect this policy requirement, although it should be noted that the Local Plan indicates that it is to be applied "subject to scheme viability". Where schemes are on the margins of viability, this indicates that the Council may – on balance – seek to prioritise affordable housing in mixed use schemes over the delivery of affordable workspace.

Urban Greening Factor / green roofs

4.31 Adopted Local Plan Policy LP57 requires that all developments contribute towards urban greening in Wandsworth, including provision of green roofs, green walls and nature-based sustainable drainage. Although the policy does not explicitly state the Urban Greening Factor required, we have assumed that this reflects the minimum requirements in the London Plan (0.4 for residential developments and 0.3 for commercial). We have modelled the inclusion of green roofs as a proxy for the various measures that developers can deploy to achieve the required UGF levels. Studies[13] on the cost installing green roofs indicate a typical cost of £100 per square metre of roof space, which we have applied to an estimate of the footprints of the buildings in each development typology. We have increased this cost by the change in the BCIS Tender Price Index[14], increasing costs to £112.80 per square metre.

Biodiversity Net Gain

4.32 The Council's adopted policy LP55 reflects the statutory requirement that developments achieve 10% biodiversity net gain. We have reflected the additional costs of achieving a 10% net gain by applying an increase in build costs indicated in the 2019 DEFRA report 'Biodiversity net gain and local nature recovery strategies impact assessment'. The Impact Assessment indicates that costs on brownfield sites in London for a 10% biodiversity net gain equate to 0.2% of build costs[15]. Increasing biodiversity in urban areas on sites which have been previously developed, as the starting base level of biodiversity is typically very low.

Development and sales periods

4.33 Development and sales periods vary between type of scheme. However, our sales periods are based on an assumption of a sales rate of up to 6 units per month (reflecting typical rates of sales in developments across London), with an element of off-plan sales reflected in the timing of receipts. This is reflective of current market conditions, whereas in improved markets, a sales rate of up to 8 units per month might be expected. We also note that some schemes in London have sold entirely off-plan, in some cases well in advance of completion of construction. Clearly markets are cyclical and sales periods will vary over the economic cycle and the extent to which units are sold off-plan

[13] See, for example, the Corporation of City of London's 'Urban Greening Study', July 2018

[14] BCIS Qtr 3 2018 = 327; Qtr 2 2024 = 391. Change = 19.57%

[15] Central Estimate – see Table 20 of DEFRA Impact Assessment

will vary over time. Our programme assumptions assume that units are sold over varying periods after completion, which is a conservative approach that ensures that the emerging policies are viable for most developments. The price points achieved by schemes in Wandsworth are towards the lower end of the London-wide range and at a level which is achieving relatively good rates of sale.

Developer's profit

4.34 Developer's profit is closely correlated with the perceived risk of residential development. The greater the risk, the greater the required profit level, which helps to mitigate against the risk, but also to ensure that the potential rewards are sufficiently attractive for a bank and other equity providers to fund a scheme. It is important to emphasise that the level of minimum profit is not necessarily determined by developers (although they will have their own view and the Boards of the major housebuilders will set targets for minimum profit).

4.35 The views of the banks which fund development are a relevant consideration; if banks decline an application by a developer to borrow to fund a development, it is very unlikely to proceed, as developers rarely carry sufficient cash to fund it themselves. Consequently, future movements in profit levels will largely be determined by the attitudes of the banks towards development proposals. However, they also need to remain competitive and if margins are set at unsustainably high levels, new entrants will be attracted into the market which will reduce rates due to competition.

4.36 Following a significant period of turbulence, including the UK's departure from the European Union, the Coronavirus pandemic, the war in Ukraine and the September 2022 'fiscal event', the market has remained relatively resilient. We have adopted a profit margin of 17.5% of private GDV for testing purposes, although individual schemes may require lower or higher profits, depending on site specific circumstances. For example, schemes of houses are relatively low risk in comparison to large flatted developments as the former will be sold throughout the construction phase and almost built to order, whereas the latter tends to be built over long periods of time with significant capital lock-up, resulting in a higher risk profile for flatted schemes. Profit rates applied to rented housing (BTR, co-living and student housing) are set at 15% of GDV. Profit on commercial development is also set at 15% of GDV.

4.37 Our assumed return on the affordable housing GDV is 6%. A lower return on the affordable housing is appropriate as there is very limited sales risk on these units for the developer; there is often a pre-sale of the units to an RP prior to commencement. Any risk associated with take up of intermediate housing is borne by the acquiring RP, not by the developer.

Exceptional costs

4.38 Exceptional costs can be an issue for development viability on previously developed land. These costs relate to works that are 'atypical', such as remediation of sites in former industrial use and that are over and above standard build costs. However, in the absence of detailed site investigations, it is not possible to provide a reliable estimate of what exceptional costs might be. Our analysis therefore excludes exceptional costs, as to apply a blanket allowance would generate misleading results. An 'average' level of costs for abnormal ground conditions and some other 'abnormal' costs is already reflected in BCIS data, as such costs are frequently encountered on sites that form the basis of the BCIS data sample.

Benchmark land value

4.39 Benchmark land value, based on the existing use value of sites is a key consideration in the assessment of development economics for testing planning policies and tariffs. Clearly, there is a point where the Residual Land Value (what the landowner receives from a developer) that results from a scheme may be less than the land's existing use value. Existing use values can vary significantly, depending on the demand for the type of building relative to other areas. Similarly, subject to planning permission, the potential development site may be capable of being used in different ways – as a hotel rather than residential for example; or at least a different mix of uses. Existing use value is effectively the 'bottom line' in a financial sense and therefore a key factor in this study.

4.40 We have arrived at a broad judgement on the likely range of benchmark land values. On previously developed sites, the calculations assume that the landowner has made a judgement that the existing use does not yield an optimum use of the site; for example, it has fewer storeys than neighbouring buildings that were developed more recently; or there is a general lack of demand for the type of space, resulting in low rentals, high yields and high vacancies (or in some cases no occupation at all over a lengthy period). We would not expect a building which makes optimum use of a site and that is attracting a reasonable rent to come forward for development, as residual value may not exceed existing use values in these circumstances.

4.41 Redevelopment proposals that generate residual land values below existing use values are unlikely to be delivered. While any such thresholds are only a guide in 'normal' development circumstances, it does not imply that individual landowners, in particular financial circumstances, will not bring sites forward at a lower return or indeed require a higher return. If proven existing use value justifies a higher benchmark than those assumed, then appropriate adjustments may be necessary. As such, existing use values should be regarded as benchmarks rather than definitive fixed variables on a site. The assumptions underpinning our benchmark land values are summarised in Appendix 6 and the benchmark values themselves are summarised in Table 4.41.1.

Table 4.41.1: Benchmark land values (£ millions per hectare)

Use	EUV	Premium	BLV
Offices	£12.86	£2.57	£15.44
Retail	£7.64	£1.53	£9.17
Industrial	£5.07	£1.01	£6.09
Open land	£0.00	£0.00	£0.50

4.42 We have not used 'alternative use values' in this study, as we have modelled a wide range of development typologies, including commercial schemes (which would, themselves, be the 'alternative uses' that would be tested, resulting in a degree of circularity). Clearly such approaches to benchmark land value would also need to meet the four tests identified in paragraph 017 summarised as follows:

- That any alternative use scheme would comply in full with development plan policies;
- That it can be demonstrated that the alternative use could be accommodated on the site in question;
- There is demonstrable market demand for the alternative use;
- There is robust justification as to why this alternative use is not being pursued by the landowner.

4.43 A recent appeal decision[16] notes that it is unlikely to be appropriate to use an alternative use value in an application scheme viability assessment where the owner has no intention of bringing forward such a scheme. Such circumstances might include where a residential developer proposes a commercial scheme as an alternative use value.

5 Appraisal outputs

5.1 The full inputs to and outputs from our appraisals of the various developments are set out in Section 6 and appendices 7 and 8. We have appraised 48 development typologies, reflecting different densities and types of development across the Borough. These sites include both residential and non-residential uses, including offices, retail and industrial, reflecting the mixed-use nature of many developments in Wandsworth.

5.2 Each appraisal incorporates (where relevant) the following levels of affordable housing in line with emerging Local Plan policies, with two alternative tenure mixes, plus three additional sensitivity analyses:

- 0% affordable to 50% affordable; 50% Social Rent and 50% Shared Ownership (reflecting the adopted policy requirement);
- 0% affordable to 50% affordable; 70% Social Rent and 30% Shared Ownership (reflecting the emerging policy requirement in the Partial Local Plan Review;
- 0% affordable to 50% affordable; 70% Social Rent and 30% London Living Rent (reflecting an alternative intermediate product);
- 0% affordable to 50% affordable; 80% Social Rent and 20% Shared Ownership (reflecting an alternative tenure mix which gives additional priority to low cost rented housing);
- 0% affordable to 50% affordable; 70% Social Rent and 30% Shared Ownership (alternative housing mix based on recent housing needs assessment).

5.3 For small sites that fall below the 10-unit threshold, we have factored in the affordable housing requirement as on-site units to test their ability to make a potential affordable housing requirement (either as on-site provision, if practical, or as a payment in lieu). If the Council decides to seek affordable housing contributions from schemes providing fewer than 10 units, for practical reasons the Council may need to secure payments in lieu of on-site delivery, but the method of calculation reflects our approach for viability testing[17].

5.4 For each development typology, we have tested a range of sales values, reflecting the spread identified in the previous section. Where the residual land value of a typology exceeds the benchmark land value, we show the result shaded green, to indicate that the scheme is viable. Where the residual land value is no more than 10% lower than the benchmark land value (and therefore on the margins of being viable), the results are shaded in orange. Where the residual land value is either negative or more than 10% lower than the benchmark land value, the result is shaded red, to indicate that it is unviable.

5.5 Given the interaction between different Local Plan policies, we have also tested the impact of other policies which have the most significant impact on viability (and therefore on the percentage of affordable housing that can be secured). These are climate change policies (LP10) and affordable workspace (LP38). While our appraisals test LP10 through an assumption of net zero development, a lower standard can be applied, but this could not be any lower than the minimum offsetting required by the London Plan (currently assumed to be £95 per tonne).

5.6 Finally, all the scenarios are tested with the growth and inflation rates summarised in Table 4.4.1. These results are attached at Appendix 9. These outputs test the potential improvements in affordable housing output that may be possible after a period of growth in house prices.

[17] This approach involves calculating a payment that is the financial equivalent on on-site affordable housing delivery. This reflects the Mayor of London's SPG on viability.

6 Assessment of appraisal results

6.1 This section sets out the results of our appraisals with the residual land values calculated for scenarios with sales values and capital values reflective of market conditions across the Borough. We have tested the viability of the adopted and emerging affordable housing policies, alongside other adopted policies.

Adopted affordable housing policy (LP23)

6.2 As noted in Section 5, we have tested two main tenure scenarios, with two additional sensitivity analyses as follows:

- Up to 50% affordable housing, tenure mix of 50% Social Rent and 50% shared ownership. This reflects adopted Policy LP23. The outputs are discussed later in this section and are attached as Appendix 7.
- Up to 50% affordable housing, tenure mix of 70% Social Rent and 30% shared ownership. This reflects the emerging Policy LP23. The outputs are discussed later in this section and are attached as Appendix 8.
- Up to 50% affordable housing, tenure mix of 70% Social Rent and 30% London Living Rent. This is a variant to the testing in the preceding bullet point. The outputs of this testing are attached as Appendix 10.
- Up to 50% affordable; tenure mix of 80% Social Rent and 20% Shared Ownership. This is a sensitivity analysis which gives additional priority to low cost rented housing. The outputs of this testing are attached as Appendix 11.
- Up to 50% affordable, tenure mix of 70% Social Rent and 30% Shared Ownership, with a housing mix based on a recent housing needs assessment. The outputs of this testing are attached as Appendix 12.

6.3 The Council's adopted policy includes a 50% strategic target albeit with reference to the London Plan Fast Track Route which sets a 35% threshold for private sites and seeks a tenure mix of 50% "low cost rented housing" and 50% intermediate housing. Although the policy itself does not specify the precise nature of the low cost rented housing, supporting paragraph 17.12 indicates that the Council will prioritise London Affordable Rent and Social Rent). For the purposes of appraising the existing policy, we have assumed that the 50% rented element is provided at social rents. These appraisal outputs are provided at tables 6.3.1 to 6.3.9 and Appendix 7. We provide summary tables (tables 6.3.10 to 6.3.13) showing the maximum viable proportion of affordable housing for each value zone and BLV.

6.4 There are significant differences in the viability of schemes and the level of affordable housing that can be viably provided. These differences manifest themselves both on an area basis and also between schemes located in the same value area.

6.5 Where sales values are at the lower end of the tested range (£8,030 per square metre), many schemes are unviable at zero affordable housing when tested against secondary office benchmark land values. This is not an issue caused by policy, but simply a function of the relationship between the residual land values generated by development and the existing use value of certain types of building. In lower value areas, the extent of uplift above existing use values is significantly lower than in higher value areas and consequently there is less scope to meet the full 50% affordable housing target. These results indicate that in lower value areas, sites with these benchmark land values are more likely to stay in those existing uses, rather than come forward for development. However, when considered against secondary retail, secondary industrial and open land benchmark land values, schemes of a range of scales can viably provide up to 50% affordable housing in many cases due to the existing use value being far lower.

6.6 As sales values increase, the extent to which schemes can meet the full 50% affordable housing

target in Policy LP23 increases, but to varying degrees, with a range of outcomes at the highest sales values in the range (£14,240 per square metre). At the highest sales values in the range, the viable level of affordable housing does not universally reach 50%, although a vast majority of schemes can achieve this level.

6.7 As can be noted from the summary tables 6.13.1 to 6.13.4, there is no uniform level of affordable housing where it can be said most schemes are viable. Attempting to craft a policy that adopts different percentages in different value zones is therefore difficult, as there are schemes in all areas which can deliver the full 50% target on sites with lower BLVs. A zonal approach would also require consideration of BLV, which would result in a complex matrix of different affordable housing targets both for each zone, but also for each type of BLV. This would also result in disputes on boundary setting (with values rarely neatly delineated into areas capable of being defined) but also which BLV each site falls into when schemes are considered at the development management stage.

6.8 Furthermore, setting any percentage in certain zones below the emerging policy target of 50% would, in principle, mean that some schemes that *could* have delivered 50% would no longer be required to do so if the Council adopted a lower percentage target.

Viability of emerging Local Plan policy LP23

6.9 As noted previously, emerging Policy LP23 seeks the provision of 50% affordable housing, with a tenure mix of 70% social rent and 30% shared ownership. This tenure mix generates a slightly lower blended capital value in comparison to the tenure split sought by the adopted policy of 50% social rent and 50% shared ownership. The new tenure mix will therefore slightly reduce the residual land values generated by development, if all other factors remain unchanged. In cases where there is a surplus residual land value above BLV, this will result in a reduced surplus, but no other material impacts (the same percentage of affordable housing could be provided. Conversely, where the residual land value is equal to, or only marginally higher than BLV, the reduction arising from the change in tenure mix might necessitate a change in the affordable housing percentage (or a change to another policy requirement).

6.10 The results of our appraisals with the emerging Policy LP23 tenure mix of 70% social rent and 30% shared ownership are summarised in tables 6.10.1 to 6.10.9 (and Appendix 8), in the same format as the summaries of the appraisal outputs with the adopted policy tenure mix. A summary of the maximum levels of affordable housing is provided within tables 6.10.10 to 6.10.13.

6.11 We have undertaken a further comparison of how the maximum viable percentage of affordable housing changes when the adopted tenure mix (50% social rent, 50% shared ownership) is substituted with the emerging mix in the partial review (70% social rent, 30% shared ownership). This analysis is summarised in Tables 6.11.1 to 6.11.4. It can be noted from this analysis that there is no change in the viable percentage of affordable housing in most cases:

- **BLV 1:** no change in 286 scenarios being viable (out of a total of 432). In 144 scenarios, the viable affordable housing percentage falls by 5% and in 2 scenarios, there is a 10% fall.
- **BLV 2:** no change in 309 scenarios being viable (out of a total of 432). In 106 scenarios, the viable affordable housing percentage falls by 5% and in 17 scenarios, there is a 10% fall.
- **BLV 3:** no change in 332 scenarios being viable (out of a total of 432). In 85 scenarios, the viable affordable housing percentage falls by 5% and in 15 scenarios the viable percentage falls by 10%.
- **BLV 4:** no change in 386 scenarios being viable (out of a total of 432). In 33 scenarios, the viable affordable housing percentage falls by 5% and in 13 scenarios, the viable percentage falls by 10%.

6.12 While these are relatively minor changes, this analysis highlights that there is a trade-off at the margins between the overall percentage of affordable housing that can be delivered and the extent to which the tenure mix prioritises social rent over intermediate products. This trade-off will be most acute when schemes are showing only marginal viability. In these cases, the Council could either apply the tenure requirement flexibly (in order to preserve the overall percentage of affordable housing delivered) or accept that the overall affordable housing percentage may fall to a degree.

6.13 From a policy perspective, the outputs of the appraisals provide clear support for the shift in tenure mix from 50% social rent / 50% shared ownership to 70% social rent and 30% shared ownership, as this change has a relatively limited effect in most scenarios.

6.14 The outputs do, of course, reflect the same broad outcomes as the results with the adopted policy tenure mix, which show a significant variation in the maximum viable percentage of affordable housing, depending on scheme composition and benchmark land value. In arriving at the adopted Local Plan policy requirement, the Council will have decided to opt for a target that is challenging in some circumstances, and accepting that some schemes will only be able to come forward with lower percentages, based on scheme-specific viability assessments submitted with planning applications.

6.15 This option maximises delivery of affordable housing by seeking the highest possible percentage on individual sites, in comparison to a reduced target tailored to the 'least viable' sites. Clearly evidence on viability needs to be considered alongside evidence of housing need and given the likelihood that a reduced target would deliver a lower overall affordable housing output, the weight of combined evidence on affordable housing need and viability points to support for a 50% target. It also allows for the maximisation of contributions across the significant number of development typologies which can viably deliver above the existing London Plan Fast Track threshold of 35%.

Table 6.10.1: Appraisal results – Emerging policy tenure mix – 70% Social Rent and 30% Shared ownership (values of £8,030 per square metre)

Affordable housing small sites contribution

6.16 The Council's adopted Local Plan Policy LP23 applies to development proposals which provide 10 or more units and it does not seek financial contributions from schemes providing 9 or fewer units. The economics of developments providing 10 units are not markedly different from units providing a lower quantum, but this distinction is clearly set by national policy. Other London boroughs have applied their affordable housing requirements to schemes of 9 or fewer units, securing contributions through payments in lieu rather than on-site delivery, due to the practical difficulties associated with delivering small numbers of affordable units.

6.17 In order to enhance the delivery of affordable housing across the Borough, the partial review will consider seeking financial contributions from schemes providing 9 or fewer units. The funds raised can then be used to fund delivery of affordable housing on Council-owned land, or to be used as grant funding to increase the level of affordable housing that can be delivered on larger developments. We have therefore tested the ability of small sites to absorb contributions towards affordable housing. Our development typologies include schemes providing fewer than 10 units and these typologies are incorporated within the testing of the affordable housing requirement. These schemes provide between 2 to 9 houses and 5 to 9 flats.

6.18 Our appraisals test the provision of affordable housing using a 'notional on-site' approach and the outputs are incorporated within tables 6.3.1 to 6.3.9 (reflecting the adopted Local Plan tenure mix of 50% rent and 50% shared ownership) and tables 6.10.1 to 6.10.9 (70% social rent and 30% shared ownership, in line with the emerging tenure requirement). Typologies 1 to 8 are all schemes providing fewer than 9 units and the appraisals indicate that in many cases, the emerging policy will be financially viable, should the Council wish to consider securing financial contributions from these sites.

6.19 Given the small scale of these types of development, it is likely that the bulk of sites that come forward for redevelopment will be backlands, former garage sites, parts of large back gardens and small storage yards. These sites will have benchmark land values towards the lower end of the range, which will mean that most small sites should be able to accommodate the full financial equivalent of 50% affordable housing. This applies equally to the emerging tenure mix of 70% social rent and 30% shared ownership, as can be seen in tables 6.10.12 and 6.10.13.

6.20 There are three main approaches to calculating payments in lieu. The first is to run a hypothetical appraisal of the scheme incorporating the required level of affordable housing provided as on-site units, which is then compared to an appraisal of the same scheme, but with all units provided as private housing. The difference between the two residual land values would equate to the payment in lieu, leaving the Applicant no better and no worse off in comparison to on-site delivery.

6.21 The second approach is to adopt a formulaic approach to calculating a payment in lieu which does not require any appraisals of the development proposal. The formula determines the uplift in value arising from the affordable housing not being physically provided on-site, in the same way as the first approach, but the calculations are more high level. The formula would be as follows:

Formula for calculating payments in lieu

X = ((A – B) x C) – ((A x C) x D) where

X = the Payment in lieu

A = The market value of a square metre of floorspace in the development

B = The value of affordable housing per square metre of floorspace (reflecting the blend between affordable rent and shared ownership

C = the number of square metres that would be required on-site to meet the 10% or 20% target.

D = Additional developer costs (the difference between the profit applied to market housing and affordable housing; and marketing costs on private housing[18])

[18] Developer's profit it typically applied at between 17-20% of GDV on private housing and 6% on the affordable housing, so the increased profit arising from converting a unit from private to affordable housing would be 11% to 14% (i.e. 17% or 20% less 6%).

6.22 If it is established to the Council's satisfaction that a development proposal could not viably provide 50% of units as affordable, a (lower) agreed affordable housing percentage would be used when calculating the formula above. For example, the payment in lieu for an 8 unit development would require 4 units (50%) to be provided as affordable housing to meet the policy target. If it is agreed that only (say) 25% affordable housing could be viably provided on site, then the calculation would be based on an assumption of 2 units of affordable housing.

6.23 The third approach is a tariff based system, in which a flat rate fee is charged per unit provided on the development. The tariff would need to be established, most likely using the first approach outlined above (i.e. a comparison of residuals), but then discounted below the maximum potential rate to allow for site specific differences in costs and benchmark land value. This type of approach is more straightforward to operate, but inevitably results in lower overall income than a more nuanced approach would raise.

Build for rent schemes

6.24 London Plan policy H11 (C) requires build for rent schemes to provide 35% affordable housing in perpetuity. Build to rent schemes are required to remain as rented housing for at least 15 years; developers are required to enter into a covenant that requires a clawback payment in the event of early sale.

6.25 Adopted Local Plan Policy LP30 'Build to rent' requires that in order to qualify for the 'Fast Track' route, proposals must provide 50% of the affordable housing as "l*ow-cost products*" and the remaining 50% at "*a range of genuinely affordable rents*". Where feasible in design terms, LP30 requires that the affordable housing be provided in a separate building or separate core and managed by a Registered Provider.

6.26 As noted earlier, build for rent is a relatively immature sector of the market with little information on viability metrics, although there has been some progress in achieving a greater level of transparency in the last few years. However, there is still ongoing debate on appropriate inputs for viability assessments, arising from uncertainty on operating costs and forward funding arrangements. However, it is often suggested that build for rent units trade at a 5% to 10% discount to market value, but profits are lower than developments built for sale due to lower risk associated with a pre-sale to the operator or investor. Profit as a percentage of GDV is typically 5% lower for build for rent in comparison to build for sale. The combined impact can sometimes result in a 5-15% reduction in GDV (after adjusting for lower profit) in comparison to housing built for sale.

6.27 In order to test the viability of the typologies on the basis of a build to rent model, we have reduced the GDVs by 5% reflecting the factors outlined in the preceding paragraph to determine whether they can meet adopted Local Plan requirement to provide 50% affordable housing but with an alternative tenure mix. This substitutes the existing requirement in Policy LP30 (50% low-cost products, such as London Living Rent and 50% social rent) with 100% social rent. The results are attached as Appendix 13.

6.28 Clearly there are differences in outcomes between build for sale and build for rent schemes, with the latter generating lower residual values and (in some cases) lower affordable housing levels as a consequence. There are many circumstances where 50% affordable housing is viable (provided as 100% social rent), but many schemes can only provide lower levels of affordable housing. The results indicate that some build to rent schemes will need to opt to use the viability-tested route .

Impact of other Local Plan policies on affordable housing provision

6.29 Although the Council is not proposing any changes to non-housing policies through the partial Local Plan review, it has asked us to consider which other policies may impact on affordable housing and to test the extent of this impact to inform decision making.

6.30 In broad terms, the magnitude of impact of other plan policies is relatively modest in comparison to affordable housing, so changes to other policies are unlikely – in principle – to significantly change the level of affordable housing that schemes can provide. For example, the Council's residential CIL rate is currently £427.13 per square metre (after indexation), but providing an additional square metre of

affordable housing will typically 'cost' significantly more in terms of reduction in potential sales revenue. If the unrestricted market value is £8,500 per square metre and the blended affordable housing value is £3,000 per square metre, the reduction in revenue would equate to £5,500 per square metre, which is almost 13 times the impact of CIL.

6.31 We have tested the potential uplift in residual land values (and therefore the potential increase in capacity to provide affordable housing) arising from 'switching off' the following policy requirements:

- **Affordable workspace requirement**, which applies to the commercial element in mixed use schemes;
- **Net zero carbon requirements**, which we have replaced with the minimum London Plan offsetting requirement (which limits carbon reductions by 35% above 2021 Part L Building Regulations); and
- **Borough CIL.** Clearly the Council does not have any planning powers to remove or reduce the Mayoral CIL, so this remains unchanged at prevailing levels.

6.32 As noted in Section 2, the Council's emerging policy seeks 10% affordable workspace on major employment schemes, to be let at a discount to market rent of 20% (50% in the Nine Elms area). It is our understanding that the Council's intention is that this requirement will remain in place in perpetuity.

6.33 The Net Zero Carbon requirement is tested using the 3% uplift in build cost, as noted in paragraphs 4.15 to 4.17. When this allowance of on-site solutions to carbon reduction is removed, we have added back in the £95 per tonne offsetting charge, reflecting the minimum requirement in the London Plan.

6.34 We have assessed the impact of 'switching off' each of the policies individually and also collectively on the maximum viable affordable housing percentages, in comparison to a base position reflecting all of the policies 'switched on'.

6.35 The residual land values for each of the policies are attached as appendices 14, 15 and 16, and Appendix 17 shows the cumulative impact.

6.36 In tables 6.36.1 and 6.36.2, we compare the maximum viable percentage of affordable housing when each policy is 'switched off'. This can be compared to the base position (all policies on) in the same tables. These tables show the results for BLV 1 and BLV 2 only as there is little variability in affordable housing output when schemes with a mid-point sales value are tested against BLV 3 and BLV 4.

6.37 As can be noted in Table 6.36.1, there are relatively minor improvements in the viable percentages of affordable housing resulting from switching other policies off. For example, low density housing schemes (typologies 1, 2 and 3) would improve from 5% to 10% as a result of CIL being set to zero, but no further improvement from switching off the NZC requirement. These three schemes do not contain any employment floorspace, so there would be no benefit relating to the affordable workspace policy being switched off.

6.38 Similarly, Typology 11 (a mixed use scheme incorporating affordable workspace) has a viable affordable housing output of 5% when tested against BLV 1. This would improve to 15% if the CIL were set to zero. However, the affordable housing percentage would not change if the affordable workspace and net zero carbon policies were switched off.

6.39 Clearly these policies are justified and appropriate as indicated by their inclusion in a plan adopted just last year. Together, these policies contribute towards meeting the wider objectives of that Local Plan, beyond maximising affordable housing delivery.

6.40 CIL in particular generates an important revenue stream to fund infrastructure that will support growth and setting this to zero would result in a significant loss of income from schemes that could already meet other policies requirements.

Table 6.36.1: Impact of 'switching off' affordable workspace, CIL and net zero carbon policies on viable affordable housing percentages (BLV 1)

7 Conclusions and recommendations

7.1 The NPPF states that "*Plans should set out the contributions expected in association with particular sites and types of development. This should include setting out the levels and types of affordable housing provision required, along with other infrastructure (such as that needed for education, health, transport, green and digital infrastructure). Such policies should not undermine the delivery of the plan*". This report and its supporting appendices test the ability of development typologies in Wandsworth Borough to support the emerging policies in the Local Plan partial review while making contributions to infrastructure that will support growth through CIL. This seeks to vary the affordable housing tenure mix from 50% social rent and 50% intermediate products to 70% social rent and 30% intermediate products. At the same time, the Council is seeking to maximise the overall delivery of affordable housing to achieve a 50% overall target.

7.2 Our analysis results in the following conclusions.

Key question 1: Can developments in Wandsworth accommodate the emerging tenure mix?

7.3 In the context of London Plan policy H5 (which makes explicit provision for schemes to provide the maximum viable proportion of affordable housing up to the strategic 50% target), there is no minimum number of viable outcomes in viability testing to support an emerging Local Plan policy. Furthermore, Wandsworth has an adopted Local Plan Policy (LP23) that already establishes a 50% target (incorporating the London Plan Fast Track threshold at 35%), so the validity of this target is not subject to further scrutiny as part of the review.

7.4 The Council's partial review seeks to amend the tenure mix of the affordable housing from 50% social rent and 50% shared ownership to 70% social rent and 30% intermediate products. As an aside (and not justification in itself), this change will bring Wandsworth's policy requirement into line with most other London boroughs which already have targets at 70% / 30%. In this regard, Wandsworth's adopted Local Plan policy is something of an exception.

7.5 They key question is therefore whether or not this change in tenure will have a significant impact on the ability of developments in Wandsworth to meet the strategic 50% affordable housing target. Our appraisals indicate that the change to tenure mix will have limited impacts on the viable percentage of affordable housing in most development scenarios. In situations where there is an impact, this is likely to be modest, with the viable level of affordable housing falling by up to 5%.

Key question 2: How can affordable housing output be maximised in Wandsworth?

7.6 Our appraisals indicate that a majority of typologies tested, particularly those brought forward on sites in secondary retail use, secondary industrial use and backlands could viably provide 40%, to 50% affordable housing in many cases. Given the nature of the Borough, these are the types of site that are most likely to be released for development as the existing use values are lower. In this context, retaining the current Fast Track threshold of 35% would result in these types of sites (which could have delivered more affordable housing) not being required to do so. This in turn could justify removing the 35% Fast Track threshold.

7.7 Our appraisals indicate that the most viable scenarios will occur where sites with the lowest benchmark land values are brought forward for development. Clearly, this is not something that the Council can really address through policy, as this is almost entirely dependent on the actions taken by individual landowners. In particular, the types of sites that actually come forward for development over the plan period will be determined by landowners' decision making on retention of existing uses versus redevelopment. There is little the Council can do to encourage the 'right' types of sites to come forward, other than regular dialogue with landowners and providing appropriate pre-application support through development management.

7.8 There is, however, always a balance to be struck between maximising policy objectives and the returns sought by landowners. If owners have options to bring sites forward for uses other than residential (or residential-led mixed use), then the value of alternative uses will also be a consideration. The delivery of affordable housing may therefore need to be tempered in lower value

areas in particular to avoid land being brought forward for non-residential uses

7.9 A significant number of London boroughs have introduced Local Plan policies which require developments providing fewer than 10 units to make financial contributions towards affordable housing. Given the small scale of these types of development, it is likely that the bulk of sites that come forward for development will be backlands, former garage sites, parts of large back gardens and small storage yards. These sites will typically have benchmark land values at the lower end of the range, which will mean that most small sites should be able to accommodate the full financial equivalent of 50% affordable housing. The Council would therefore be able to seek contributions from small developments in a majority of cases. We have suggests approaches for calculating contributions in this report

7.10 London boroughs have seen an increase in applications for student housing in recent years, which divert sites that could have been developed for conventional housing to this alternative use. This reduces the potential delivery of affordable housing. Some boroughs have sought to reduce the impact on affordable housing supply of this 'leakage' of sites from conventional housing by introducing policies that require student housing to provide an element of 'conventional' C3 affordable housing. For example, LB Southwark requires that purpose built student housing schemes provide 35% conventional C3 affordable housing, with 35% of the remaining student accommodation let at affordable student rents. This policy is applied on a 'subject to viability' basis, in line with its other Local Plan policies relating to affordable housing. Clearly, this is an option that Wandsworth could consider if it anticipates a significant increase in the number of sites being brought forward as purpose built student accommodation.

Key question 3: Should the Council consider a zonal approach to affordable housing with different affordable housing targets?

7.11 Some councils which operate more of a fixed or 'quota' approach to affordable housing obligations have set (or have considered setting) zonal approaches to affordable housing to reflect different circumstances within their areas. This is typically more appropriate for district councils with fairly homogenous development typologies, the only variation being achievable sales values.

7.12 The difficulty of such an approach in any London Borough (including Wandsworth) is that there is variability not only in achievable sales values, but also type of development and benchmark land value. Significant variations in benchmark land value can mean that development proposals can be viable with full policy requirements in the lowest value areas and, conversely, schemes may struggle to meet policy requirements in the higher value areas.

7.13 In urban areas, there are also practical difficulties associated with defining appropriate boundaries for the different zones as sub-markets are rarely neatly defined, unless significant physical barriers exist (such as railways or major highways. This would inevitably result in challenges from owners on the boundaries of sites zones, seeking to argue for adjustments so that their sites are moved into a zone with lower affordable housing requirements.

7.14 A further consideration is how a zonal approach in an individual London Borough would conform with the requirements of the London Plan. In particular, it would be required to be in general conformity with the Fast Track threshold approach, which implies fairly limited local discretion on affordable housing targets.

7.15 To date, other London Boroughs have opted for single strategic affordable housing targets (as has Wandsworth), primarily for the reasons set out in the previous paragraphs. Similarly, the various iterations of the London Plan have always only set a single London-wide strategic affordable housing target, despite the significant variation in sales values across the capital.

Key question 4: Do any of the other adopted policies have a significant impact on the level of affordable housing that can be secured?

7.16 Clearly the adopted Local Plan incorporates a range of policies which collectively impact on the residual land values generated by developments. In cases where new development generates a significant surplus above existing use value, the cumulative impact of these policies can be

accommodated. However, there is variability in existing use value and in some cases, the uplift generated by new development is more limited and not all policy requirements can be accommodated in full.

7.17 Affordable housing requirements take up the vast majority of the uplift above existing use value, so other policies have a relatively limited impact on the percentages of affordable housing that can be secured. Our testing indicates that where scheme viability is marginal, reducing CIL to zero, switching off affordable workspace requirements, and reducing net zero carbon requirements will only have a limited positive impact on affordable housing delivery (in the region of 10%).

Key question 5: Should the Council adopt a variable approach to affordable housing targets over the plan period?

7.18 Other boroughs have adopted Local Plan policies which start at relatively low levels (based on a 'best fit' of viability outcomes at the point plan policies are tested) with a mechanism for reviewing targets over the plan period in order that they can be 'stepped' upwards over the plan period.

7.19 The main drawback with such an approach is that schemes that could have provided more affordable housing would not be required to do so and the Council would miss out on the opportunity to maximise delivery over the plan period. Furthermore, the land market would start to reflect the reduced target, which would inflate landowner expectations and cause difficulties for local authorities in securing the provision of affordable housing.

7.20 The preferable option is to set an ambitious target that cannot necessarily be met by every development at the outset. While this may involve more viability testing at the development management stage than a lower target would, each scheme will provide the maximum viable percentage of affordable housing, leading to higher overall delivery than would otherwise have been the case.

Additional observations

7.21 Viability measured in present value terms is only one of several factors that determine whether a site is developed. Developers need to maintain a throughput of sites to ensure their staff are utilised and they can continue to generate returns for their shareholders. Consequently, small adjustments to residual land values resulting from changes in policy can be absorbed in most circumstances by developers taking a commercial view on the impact. However, in most cases the impact on land value is sufficiently modest that this can be passed onto the landowner at the bid stage without adversely impacting on the supply of land for development.

7.22 In considering the outputs of the appraisals, it is important to recognise that some developments will be unviable regardless of the Council's requirements. In these cases, the value of the existing building will be higher than a redevelopment opportunity over the medium term. However, this situation should not be taken as an indication of the viability (or otherwise) of the Council's policies and requirements.

7.23 It is critical that developers do not over-pay for sites such that the value generated by developments is paid to the landowner, rather than being used to provide affordable housing and to meet other planning policy requirements. The Council should work closely with developers to ensure that landowners' expectations of land value are appropriately framed by the local policy context. There may be instances when viability issues emerge on individual developments, even when the land has been purchased at an appropriate price (e.g. due to extensive decontamination requirements). In these cases, some flexibility may be required subject to submission of a robust site-specific viability assessment.

Appendix 18 - Summary of stakeholder engagement responses

London Borough of Wandsworth Whole Plan Viability Assumptions – March 2024

This schedule sets out the assumptions identified by the Council's viability consultants who have been commissioned to carry out the Whole Plan Viability Study. The study will form part of the evidence base for the Local Plan partial review and once adopted the viability assumptions will form part of the material considerations for viability appraisals across the borough. Please provide your comments to each of the assumptions in the comments section in the table. Your responses will be treated as **confidential** – anything that is used in the report will be generalised.

</table>
</td>
<td>

Figures provided are inaccurate not reflective of current market rates and build costs provided are undervalued – these costs are also likely to continue to rise due to inflation and labour/skills shortage.
Figures provided for building flats especially are underestimated.
One respondent agreed with these assumptions.
Acknowledgement that in the industry that RICS BCIS database suffers from challenges including very small sample sizes and limited categorisation. It is also noted that this database excludes contractors design risk contingency which forms part of present-day tender prices. Viability Studies should not rely on RICS BCIS figures alone.
Suggestion made to use benchmarking data taken from recent planning application stage viability assessments.
Further detail was requested on the locations and dates these figures are based on.
Suggestion made to show total cost PSF inclusive of external works and demolition as a total figure.
Complexities of demolition not accounted for in these figures – demolition can be complex and expensive due to constrained access within the borough.
£/PSF on smaller developments can be higher than larger developments because of ratio of fixed costs relative to total floorspace and constraints including site accessibility and construction logistics.

</td>
<td>
BCIS data is based on tenders for live developments and it is the only independently verified source of construction costs. Its use for Local Plan viability testing is advocated by the PPG.

With regards to comments relating to inflation, this affects any viability work and it is not an issue solely related to BCIS.

The data is all related to the London Borough of Wandsworth, as noted in the Appendix containing the BCIS source data.
</td>
</tr>

Standard Assumptions - Residential	Figure	Comments	BNPPRE comment

	17.5% Applied to Open Market GDV
	6% Applied to Affordable GDV
	12% Applied to First Homes
	12-15% Applied to Build to Rent GDV
		• One respondent agreed with the figures.
		• Suggestions that developer profit margin should be at 20% and that this is the standard rate.
		  o Noted that it is difficult to achieve 20% on any development at present time before the proposed affordable housing contributions.
		  o Suggestion that these figures are non-sustainable due to the risks of development.
		  o Suggestion that lenders will only lend on projects with a return of 17% on cost. The proposed figures underestimate risk.
		• Small developers will be disproportionately affected by proposals because returns after affordable housing provision will not attract investment and allow project feasibility.
		• Request received to justify these figures further.
		• Request to provide breakdown of assumptions for different typologies such as older persons housing, purpose-built student housing, co-living developments, office and retail and industrial.
		• Minimum profit required y investors has increased over the last 18-24 months due to increased risk and uncertainty in the market.
		• Risk associated with delivery of first homes is only marginally lower than for open market sale homes.
		• Registered Providers' market has weakened, meaning they are less likely to be in a position to purchase completed homes – the proposed 6% return does not reflect this risk.
			These profit margins reflect the actual margins applied in the c. 250 schemes that we have reviewed over the past 12 months.

Standard Assumptions - Residential	Figure	Comments	BNPPRE comment
Development finance	6%-7%	• Figure is underestimated: o Suggestion that this figure should be between 1-1.25% p/m meaning 12-18% a year plus arrangement and legal fees. o Suggestion that this figure should be up to 12% due to interest rate rises. o Suggestion that this figure should be at least 10%. o Suggestion that this figure should be between 9-12%. o Suggestion that this figure should be between 7-8%. o Suggestion that this figure should be at least 12.5%. • Request for the source of this figure and consistency with the current interest rates and approach to debt and equity funding. • The proposed figure is more aligned to a best-case scenario for a large and experienced developer with a long track record. • The cost of finance has increased in recent months as a result of increased interest rates and increased risk associated with development. • One respondent agreed but noted the figure could be higher, the smaller the developer.	The 6% - 7% range reflects the interest rates applied in the c. 250 live viability assessments have reviewed in the past 12 months. In addition, we have seen formal valuations from other major valuation practices which assume 7% finance rate. The plan will be in place for a 15 year period and it is therefore reasonable to reflect normal medium term interest rates.
Exceptional Costs	Non-included - An 'average' level of costs for abnormal ground conditions and some other 'abnormal' costs are already reflected in BCIS data	• One respondent was in agreement due to these being project specific. • Suggestion that BCIS figure is significantly low. • Exceptional costs in London developments are not reflected by BCIS – London has unique exceptional costs such as complex demolition requirements, higher infrastructure costs, higher party wall costs due to close proximities in siting of London properties. • Unrealistic to assume complex brownfield development sites will not incur abnormal costs. • Suggestion that viability study will allow for abnormals to ensure policy requirements are not set on the margins of viability.	The PPG is clear that exceptional costs should be reflected in Benchmark Land Value, thus having a neutral impact on viability. Clearly if schemes encounter exceptional costs at the application stage, these can be reflected in any FVA submitted as an application document. These would need to be fully justified and evidenced.

Standard Assumptions - Residential	Figure	Comments	BNPPRE comment
Marketing costs including sales agent's fees	2.5% of private housing GDV	• Two respondents agreed with this figure. • Further clarity required on what this figure is applied to, and the differentiation between uses/ • Suggestion that this figure is considered to be at the lower end of the potential range. • Request that detailed evidence in support of the assumptions made must be included within the study.	This is fully in line with the allowances we see applied in the c. 250 live viability assessments we have reviewed in the past 12 months.
Sales Legal Fees	0.5% of private housing GDV	• Two respondents agreed with this figure. • Suggestion that developers pay an average of £2000 per transaction for small developments between 1-3 flats. • Suggestion that this figure is considered to be at the lower end of the potential range. • Request that detailed evidence in support of the assumptions made must be included within the study.	This is line with actual figures we have seen in developers' own appraisals and is also reflected in the c. 250 live viability assessments we have reviewed in the past 12 months.
Professional fees	10% of construction costs	• Suggestion that fees on small sites can exceed 10% figure due to increased burden of planning conditions, reports, environmental considerations etc. • Suggestion that 10% would apply to larger developments (10+ units) and that 15% is usually more realistic for development of 1-3 units. • Two respondents agreed with the figure. • Suggestion that this figure is considered to be at the lower end of the potential range. • Request that detailed evidence in support of the assumptions made must be included within the study.	We have not seen a higher figure than 10% applied in any of the c. 250 live viability assessments we have reviewed in the past 12 months, including on smaller schemes.
Section 106 requirements	£1,910 per dwelling	• Clarification required as to whether this includes CIL. • Nowhere in these assumptions takes into account CIL costs. • Request for further justification as to how this has been evidenced. • Suggestion that the cumulative impact of all policies must be tested in the study.	This obviously does not include CIL as this is applied as a separate figure, alongside Mayoral CIL. The cumulative impact of all policies has been taken into account. This is only one requirement of many, as identified in the report.

Standard Assumptions - Residential	Figure	Comments	BNPPRE comment
Section 278 works	£1,000 per residential unit	• The removal of a drop-kerb alone is over £1,000 per unit. • One respondent agreed with the figure. • Request for further justification as to how this has been evidenced. • Suggestion that the cumulative impact of all policies must be tested in the study.	This is a widely adopted figure in Local Plan viability testing. If there are particular costs when a scheme comes forward, these can be evidenced and reflected in a scheme-specific FVA. The cumulative impact of all policies has been taken into account. This is only one requirement of many, as identified in the report.

Sales period	5 dwellings per month (assuming 50% sold off plan)	• This figure is optimistic and underestimates sales period for small and small non-new build developments.
		  o One respondent states sales are taking on average 4 months from offer to acceptance and total sales period is 6-9 months from completion of site.
		  o One respondent reported the average sales period they currently experience is a 6-month period to sell 5 flats from listing date.
		  o Suggestion that sales period will depend on the product being sold.
		  o Suggestion that 50% sold off plan is too high an assumption in the current market and suggestion that it is unrealistic to assume any off-plan sales at all in small development.
		• Suggestion this assumption is not possible at all with the current high interest rates.
		• Request for the evidence to justify assumptions to be included in the study.
		• Request to consider this assumption against current market conditions.
		• Request for clarity with regards to non for sale housing.
		• Currently facing longer sales and let periods than the assumed which affects cash flow and increases holding costs for developers.
			This figure reflects assumed sales rates in live viability assessments.

Built to Rent let period	1 let per week	• Two respondents agreed with this assumption, given the high rental demand. • Suggestion to explain the stabilisation period.	No comment

<table>
<tr><th>Standard Assumptions - Residential</th><th>Figure</th><th>Comments</th><th>BNPPRE comment</th></tr>
<tr><td>Affordable Tenure Mix</td><td>Test 1: 70% Social Rent and 30% Shared Ownership

Test 2: 70% Social Rent and 30% London Living Rent

Test 3: 70% London Affordable Rent and 30% London Living Rent

Test 4: 70% London Affordable Rent and 30% Shared Ownership</td><td>• Query received around the basis for these tests and if the percentages have been derived form actual need.
• Figures are too high and would prevent the objective of affordable delivery.
• It is not feasible for sites below 50 units to provide on-site affordable housing.
• Suggestion that for larger schemes, alternative tenure splits should be tested and suggested specifically a split of 50% social rent to 50% shared ownership.
• LAR cannot attract grant funding.</td><td>These are testing assumptions reflecting emerging policy.</td></tr>
<tr><td>Affordable housing rents per week</td><td>To establish the capital value of the rented units a discounted cashflow model is used (replicates the approach used registered providers when preparing bids). The model projects the rents over a 40 year period and deducts the estimated voids and bad debts, management costs, maintenance costs and allowances for major repairs. The model establishes the present value of the net rental income by applying a discount rate (reflecting the cost of funds and RP's risk margin), reflecting the price that can, in principle be paid to acquire the completed units from a developer.

<table><tr><th>Rent type</th><th>1 bed</th><th>2 bed</th><th>3 bed</th><th>4 bed</th></tr><tr><td>Social rent</td><td>£106.59</td><td>£124.45</td><td>£139.60</td><td>£157.46</td></tr><tr><td>London Affordable Rent</td><td>£168.34</td><td>£178.23</td><td>£188.13</td><td>£198.03</td></tr><tr><td>London Living Rent</td><td>£270.99</td><td>£301.10</td><td>£323.08</td><td>£323.08</td></tr></table></td><td>• Queries received as to why 4 bed is less expensive p/w compared to the 2 and 3 bed for social rent.
• Queries received as to why the 3 and 4 bed rent is the same for London Living Rent.
• Difference between 1 and 4 bed rents are very low considering the floorspace difference between these typologies.
• Query as to whether developers actually build 4 bed units.
• Social rents look particularly low.
• Request for clarity on how the London Living Rents have been calculated – is this based on an average across the borough?
• Suggestion that new social rent is likely to be closer to target rent caps set by the Government.
• Suggestion that these rents make projects unviable.
• One respondent noted they were unable to comment because assumptions are unclear.</td><td>Rents are set according to MHCLG formulae. Rents for 4 beds are not lower than rents for 3 beds.

That is a function of the formulae by which social rents are set – floor area has very little impact.

Based on lowest ward rents set by the GLA

That is the purpose of testing them.

It is unfortunate that the respondent is not familiar with how affordable housing operates.</td></tr>
</table>

<table>
<tr><th>Standard Assumptions - Residential</th><th>Figure</th><th>Comments</th><th>BNPPRE comment</th></tr>
<tr><td>Affordable Housing - Intermediate</td><td>The value of the initial equity stake sold to the purchaser (typically 25%) is the first segment of value. The purchaser will also pay a rent on the retained equity at rate not exceeding 2.75% of the retained equity. The capital value of this rent is calculated using a discounted cashflow model.</td><td>Assuming this relates to shared ownership, it would be helpful to buy only 10% equity to assist residents in getting on the housing ladder.
One respondent agreed with rent rates of no more than 2.75%.
Suggestion that rent increases need to be determined, as if the annual increases are too great, rents could become unaffordable.
Request for further clarity on affordability terms in line with the Wandsworth Housing Team requirements.
Suggestion that the funder will be unable to attain these rates in the open market to finance projects.
One respondent noted they were unable to comment because assumptions are unclear.</td><td>This is not something with the Council's control – rent increases are set by the regulator of social housing.

It is unclear what funder the respondent is referring to, as these units will be purchased by RPs and then part sold to leaseholders.

It is unfortunate that the last respondent is not sufficiently familiar with affordable housing to provide any comments.</td></tr>
<tr><td>Affordable Housing mix applied</td><td>Test 1<table><tr><th>Tenure</th><th>1 bed</th><th>2 bed</th><th>3 bed</th><th>4 bed</th></tr><tr><td>Rented Units</td><td>40%</td><td>30%</td><td>20%</td><td>10%</td></tr><tr><td>Shared ownership and London Living Rent</td><td>35%</td><td>40%</td><td>15%</td><td>10%</td></tr></table>Test 2<table><tr><th>Tenure</th><th>1 bed</th><th>2 bed</th><th>3 bed</th><th>4 bed</th></tr><tr><td>Rented Units</td><td>45%</td><td>30%</td><td>20%</td><td>5%</td></tr><tr><td>Shared ownership and London Living Rent</td><td>40%</td><td>40%</td><td>15%</td><td>5%</td></tr></table></td><td>Query received on whether these assumptions are based on the actual need, and observation that town planning requirements are different to this mix.
Query received on what the drivers are between Test 1 and Test 2.
Suggestion that there is a need to consider affordability constraints for shared ownership where it is unlikely that 3 or 4 bedroom units would meet Wandsworth's affordability requirements.
Suggestion that these assumptions are possible but difficult to achieve.
Suggestion that the quantum of affordable housing tested in the study must adopt the same measure (habitable room) as the policy.
One respondent noted they were unable to comment because assumptions are unclear.</td><td>These mixes are supplied bv the Council based on Policy LP24 and recent housing needs assessments.</td></tr>
</table>

<table>

<tr><td>Shared ownership (overall blended rate)</td><td colspan="5">Variable, driven by unrestricted market value</td></tr>
</table>
</td>
<td>

Regarding social rent, we can assume a 1 bed is 50 square meters, which equates to 164 square feet. Therefore £125 x 164 square foot = £35,260. It is unclear what this means or what this data can be used to determine.
Suggestion that assumptions are converted from imperial to metric measurements as the standards are all in metric.
Value differential between social rent and London affordable rent is very high, and suggestion that a 10-20% value differential is normally expected. Suggestion that this needs to be reconsidered alongside the rents.
Shared ownership affordability differs from current policy requirement.
Clarification sought as to why the £94k income threshold has been tested given the current cap in £90k set by the GLA and National Government.
Suggestion that these assumptions restrict the market.
The capitalised values are significantly overstated, and suggestion received that evidence in support of these assumptions must be included in the study.
One respondent noted they were unable to comment because assumptions are unclear.

</td>
<td>This respondent cannot convert square metres into square feet. 50 square metres equals 538 square feet, not 164 square feet. They have also applied an incorrect value in their calculation (£125 rather than £215). The unit value of a one bed is £215 x 538 square feet equals £115,670, not £35,260.

Value differentials are driven by the rents charged by the RP.

It is unfortunate that the last respondent is not sufficiently familiar with affordable housing to provide any comments.</td>
</tr>

<tr><td>M4(3) (a) wheelchair user - adaptable</td><td>£11,434.82</td><td>£14,122.49</td></tr>
<tr><td>M4(3) (b) wheelchair user-accessible</td><td>£11,668.93</td><td>£31,208.46</td></tr>
</table>
</td>
<td>

One respondent agreed with assumptions on flats,
The percentage and values seem very high on houses.
Suggestion that specialist housing is to be provided on the ground floor level only to reduce costs and prevent issues arising from broken lifts.
Further information requested on how percentages have been calculated and the costs alongside this.
Suggestion that evidence from a suitably qualified Quantity Surveyor must be provided to support this assumption.
One respondent noted they were unable to comment because assumptions are unclear, and another noted they could not comment due to lack of experience in this area.

</td>
<td>No comment</td>
</tr>
</table>

Standard Assumptions - Residential	Figure	Comments	BNPPRE comment
other housing is to meet Part M4 (2) (accessible and adaptable).			
Policy LP10 promote zero carbon Responding to the Climate Crisis	Uplift of 5% of build costs inclusive for both policies.	• Suggestion that this results in more costs for developers to foot. • Two respondents agreed with this assumption. • Suggestion that this figure is split into three areas – (1) The building materials (the timber frame, together with increased insulation will produce a building far below the standard currently required today), (2) The build process and (3) The ongoing running costs • Evidence requested on how the 5% has been formulated. • Suggestion that evidence from a suitably qualified Quantity Surveyor must be provided to support this assumption.	Yes but there is evidence that highly sustainable homes achieve premium values in comparison to similar homes with conventional heating systems. These premium values are not reflected in the assessment.
Policy LP10 Responding to the Climate Crisis (see details within Local Plan)	Uplift of 15% of build costs (Carbon offset is set at £95/tonne for offsite carbon reductions if sufficient onsite reductions cannot be achieved as per the following - major development - zero carbon standards with minimum on-site reduction of 35%, non-major new development - minimum on-site reduction of 35%. Residential development - 10% reduction, non-residential - at least a 15% reduction)	• Two respondents agreed with this assumption. • Suggestion that offsite construction should be promoted so that wherever possible the target of 300,000 new homes can be met. Producing kitchens and bathrooms in factories leads to reduced costs and increased outputs and saves time on site. • Suggestion that this results in more costs for developers to foot. • Suggestion that evidence from a suitably qualified Quantity Surveyor must be provided to support this assumption. • Evidence requested on how the 15% uplift has been formulated. • Suggestion that these assumptions will price out viable projects which are much needed in the area.	No additional advice from a QS is required as there is an extensive and robust research study undertaken by Levitt Bernstein et al on these costs.

Standard Assumptions - Residential	Figure	Comments	BNPPRE comment
Policy LP38 requires that developments providing more than 1,000 square metres of employment floorspace provide 10% at affordable workspace at discounted rents.	Discounts of 20% to 50% of market rent to be applied to 10% of the Gross economic floorspace.	• Suggestion that this results in more costs for developers to foot. • Two respondents agreed with these assumptions. • Request received for further detail on the affordable workspace assumptions, market rent and length of discount. • Suggestion that the cumulative impact of all policies must be tested in the study.	This is an adopted policy, so complaints about additional costs for developers is irrelevant. It is unclear why this respondent repeatedly makes the same comment when the consultation literally listed every single policy that would be reflected in the assessment.
Policy LP57 requires that residential developments achieve an Urban Greening Factor as per the London Plan guidance.	£112.80 per square metre of roof space to be provided as green roofs.	• Suggestion that this results in more costs for developers to foot. • Suggestion that evidence from a suitably qualified Quantity Surveyor must be provided to support this assumption. • Two respondents agreed with this assumption. • Request received for further evidence behind this assumption.	This is an adopted policy, so complaints about additional costs for developers are irrelevant.
Policy LP55 Biodiversity requires that developments achieve Bio-Diversity Net Gain of 10%	0.2% increase in build costs, in line with DEFRA Impact Assessment	• Suggestion that this results in more costs for developers to foot. • Suggestion that evidence from a suitably qualified Quantity Surveyor must be provided to support this assumption. • Two respondents agreed with this assumption and suggestion made to use hedges instead of walls.	This is a statutory requirement, so developers would need to meet this requirement even if it were not a London Plan and Local Plan policy.
Small Sites approach	The Council is seeking to apply an affordable contribution to sites of under 10 dwellings, this would most likely be in the form of an offsite contribution and the Council are seeking views on the two approaches: 1) Formula based approach, where a percentage is applicable under different circumstances:	• Figures are unrealistic. • Suggestion that small sites (1-9 units) are already barely viable, and that affordable housing contributions on small sites will make these projects unviable. • The industry is not experiencing sufficient profits to support the yield of the proposed contributions. • Suggestion that this policy will slow down the delivery of housing, add to costs, slow down	There is no evidence that small schemes are “barely viable” – they are as viable as schemes just above the threshold. If there are genuine viability issues when a scheme comes forward, applicants can evidence this and provide a lower proportion of affordable housing.

Standard Assumptions - Residential	Figure	Comments	BNPPRE comment
		receipt of CIL, council tax, business rates and other economic benefits to the borough. • Example shared that there is barely enough profit to cover overheads, never mind £50,000-£100,000 per unit. • Suggestion that these figures will make small scale developments unviable and that a price of £50,000 per unit will not work in any development financial analysis. • Example shared that a single one bed conversion/extension into a two-bed property within the borough usually takes 1 year with a gross profit margin of 12-15% (£80,000 to £100,000). Even with a 4% levy on the purchase price which is (for example) £500,000m this would result in a £20,000 reduction in the gross profit which makes development unviable. • Suggestion that this table is unclear – does it mean that if a certain percentage is affordable housing, based on number of units, then a contribution of £50,000 will be given by the Council to the developer? If this is the case, how does it work in practice with 1 unit? How can 10% be affordable housing when there is only 1 unit? Surely it can only be 100%. • It is inappropriate for the local authority to require developers working on sites of under 10 dwellings to provide any social or affordable housing directly to the council. • Suggestion that developers should enter discussions with local authorities on renting the units delivered for an initial 5-year period. Suggestion that this would ensure the council guarantees the rent for 5 years with no gap, including annual inflation. This would mean hat the developer can rent or sell after reinstating to the original condition. This is additionally attractive when in a market when sales are flat and ensures the developer is not left open to the mercy of the bank. Before starting to develop, the developer should be able to receive this grant/contribution which will enable them to start the project which includes part demolition, part stripping. • There should be no CIL on developments under 10 units to attract small developers back into the market and assist the Council in meeting their housing objectives.	

No. of units proposed (gross)	% Affordable Housing		
	For conversions and reversions (where there is no loss of former employment floorspace.	For new build development or redevelopment (where there is no loss of former employment floorspace)	For any units replacing employment floorspace
9 units	36%	45%	90%
8 units	32%	40%	80%
7 units	28%	35%	70%
6 units	24%	30%	60%
5 units	20%	25%	50%
4 units	16%	20%	40%
3 units	12%	15%	30%
2 units	8%	10%	20%
1 unit	4%	5%	10%

2) A price per unit similar to several other London Boroughs, for example:

"the study determined that a financial contribution of £50,000 per unit would be viable in almost all scenarios across all value areas across the Borough. Whilst higher value areas, can conservatively provide £100,000 per unit".

Standard Assumptions - Residential	Figure	Comments	BNPPRE comment
		• London should make use of existing buildings as they are more attractive than new-builds and already have all the statutory services and infrastructure in close proximity. Using existing buildings means projects can completed quicker (i.e.. 6 months) and with half the carbon footprint of new-builds. • Request received for further evidence on the formula-based approach and the financial contribution sums per unit. • Formula-based approach is wrong and will prevent development. • If units are granted which lead to a loss of employment floorspace, this could be because employment floorspace is not protected or because the applicant has demonstrated that it is not in demand – developers in this case are being further penalised by the need to provide affordable housing even where they have met policy requirements for justifying the loss of employment space. • Favour towards the price per unit approach, but request received for further justification of the £50k and £100k figures. • Imposition of stringent requirements on SME's, which are recognised in the NPPF and London Plan as vital contributors to housing stock, will hinder delivery of much needed and important contributions from this sector. • SME's do not enjoy the buying power, finance costs and other economies of scale compared to the larger developers. These assumptions point towards a very great risk that housing supply via this sector will be lost, and this is why small sites should not have to make affordable housing contributions. • Proposals will deter development in the borough, and buyers already avoiding sites in Wandsworth in anticipation of this update to the local plan. • One respondent noted they were unable to comment because assumptions are unclear. • Request received for outputs of the viability study to be verified against recent findings from local planning application stage viability assessments for small schemes of 10 units or less, and/or any other case study schemes in the borough, informed by more detailed assessment of design	

Standard Assumptions - Residential	Figure	Comments	BNPPRE comment
		efficiencies, construction costs and achievable values. • Suggestion that the results of the viability assessment are to be tested against any market indicators such as weakened market conditions for housing delivery.

<td>

Suggestion that the values for flats are overstated.
Suggestion that data used is out of date, inaccurate and flawed across the board throughout these assumptions.
Suggestion that the data used in the assumptions is to be corrected and a re-consultation is carried out on amended figures.
Data used is out of date and flawed across the board.
One respondent agreed with the assumptions for West, South, South-East, but requested further information on why the Mid, North, East is 10% more, with the assumption that Nine Elms is higher due to the higher CIL.
One respondent agreed with all figures.
Further information requested on differentiation between houses and flats.
Suggestion that the values for west, south and south-east are too high, and these should be closer to £6,500psqm given local comps.
The market is very sluggish and that is currently difficult sell. It is difficult to sell at these figures because of high interest rates and buyers looking for bigger discounts due to current market conditions.
Achievable residential values have reduced considerably as a result of increased interest rates and (in turn) reduced mortgage affordability.
Suggestion that all figures are too high/optimistic and these should be around £7000 and £6800 and £7800 and £8700 respectively.
Suggestion that the figures are too generalised and can’t be accurate due to the diverse nature of areas within the borough.
Evidence must be provided in the study to support the values.
Insufficient scenarios and typologies have been tested.

</td>
<td>We have undertaken an extensive review of all the residential transactions completed in LB Wandsworth since January 2022. This validates these assumptions.

No evidence provided by respondents to support their assertions.</td>
