Lighting Concept Design

Lighting in the public realm, aligned with safety by design standards, holds paramount importance in fostering secure and inviting environments.

Well-lit public spaces enhance visibility, deterring criminal activity and reducing accidents. Thoughtful lighting design ensures pedestrians feel safe and confident, promoting increased foot traffic and community engagement.

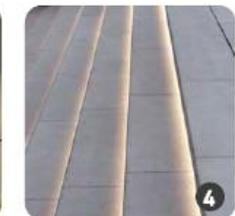

Moreover, strategically placed lighting can improve wayfinding and accessibility for all individuals, including those with mobility challenges.

By prioritizing lighting in accordance with safety by design standards, appropriate public lighting design can create inclusive, resilient, and welcoming spaces that enrich the lives of residents and visitors alike.

- 1 Inset wall lighting bands
- 2 Inlay ground lighting bands follow curved paving design
- 3 Recessed lighting fixtures
- 4 Lighting for stepped accesses

Reference images

1. Inset Wall Lighting Bands

Reference 1 VENUS 3D OPTIC, flexible low output, warm CCT, external luminaire with integrated narrow beam optic to control the lit effect against a surface reducing spill light.

2. Inlay Ground Lighting Bands Follow Curved Paving Design

Reference 2 VENUS 3D, flexible low output, external luminaire for location / feature lighting to reduce ULOR impact.

3. Recessed Lighting Fixtures

Reference 3 STI259, wall recessed, warm CCT, external luminaire, asymmetric forward throw with precise optics to control and direct distribution towards the floor.

4. Lighting For Stepped Accesses

Reference 4 XOOLINE, external minimal linear, warm CCT, low diffuse optic to control light output onto stepped areas.

Hours of Operation

It is proposed that the lighting would operate only between dusk and 11pm as a minimum. External lighting will be controlled such that no artificial illumination will be used during daylight hours.

Light Spillage

All luminaires will be located to avoid any form of light spillage on to the adjacent properties and the surrounding natural habitat. All light sources will have a minimum luminous efficacy of at least 100 luminaire lumens per circuit watt. No upward directional illumination is proposed and all lighting will be direction downward to reduce night pollution.

It is proposed that all external lighting complies with the following:

- BS 5489-1:2013 Code of Practice for the design of road lighting. Lighting of roads and public amenity areas; and
- BS EN 12464-2:2014 (36) Light and lighting – Lighting of workplaces – Part 2 Outdoor work places.

Light Levels

All public realm lighting would vary from 5 lux to 50 lux.

Specification

Further information regarding lighting specification is appended to this document.

SPECIFICATION TEXT

IP67 flexible dot free and perfectly homogeneous linear LED light line with a 18 mm x 17 mm (W x H) cross section. With its unique linear optics technology, the 20° optics provide homogeneous and precise light distribution without unwanted scallop effects (as with TIR lenses). Polyurethane encapsulation offering a premium water proof sealing, UV resistance, chemical stability against urban gazes and protection against abrasion. True Color technology for an optimal rendition of the LED spectrum (minimal color shift). Vertical bending only, with radius of 150 mm the ideal solution for indoor/outdoor organic facade accent lighting or decorative applications requiring IP67 ingress. Freely configurable in length. Backside cable feed for an optimal fixture to fixture overlap. 110 mm long cable at both end of the luminaire with IP67 male/female connectors or open-ended cable(s) (length of 2 m), with included mounting accessory of choice. Light source assembled using state of the art automated Reel to Reel (R2R) production process supporting LED Linear™ Tj Away® thin flexible circuit board technology.

In combination with Chip Scale Package LEDs (CSP) a thermal resistivity of 5.33 K/W is achieved for an optimal heat dissipation (junction to profile), which guarantees an outstanding lifetime of > 60,000 hrs (L80/B10). Embeds high quality LEDs with 3 step MacAdams (SDCM3) binning centered on target CCT (One Bin Only) with an extended photometric code of Wxxx/339 ensuring an exceptional color consistency over the rated lifetime. Premium color rendition with a CRI of 95 (R9 = 71) and TM-30-15 up to $R_f = 92 / R_g = 100$ ensuring a remarkable light quality. Consistent light intensity all along the luminaire length is obtained thanks to active current regulation operated by dedicated integrated circuits (ICs) on each step. Protected against electrostatic discharge +/- 2,000 V and polarity miswiring. Fully PWM dimmable for frequency > 0Hz up to 2 kHz (flicker free for frequency higher than 1.2 kHz according to IEEE P1789 standard). Engineered and produced in Germany.

Max feed-in length	4.7 m	6.5 m	9.5 m	14.3 m	19.1 m	28.7 m	47.8 m

Calculation refers to the cable configuration on site.

The information listed in the table is only refers to the conductor-based voltage drop of max. 0.85V at 24V DC input voltage.

Regarding the electromagnetic compatibility (EMC) the maximum cable length is defined by the power supply manufacturer.

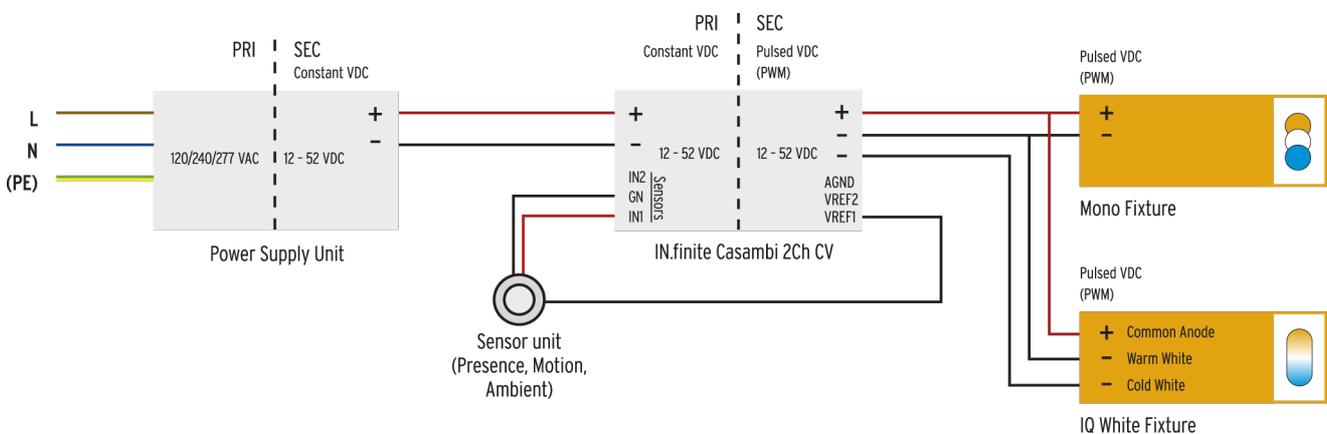

A cable length between power supply and planned product longer than indicated by the datasheet of the power supply is possible. However the electromagnetic compatibility can then be influenced by the conditions of the installation site. There is no data on electromagnetic compatibility for longer cable lengths, which might lead to the necessity of an evaluation of the electromagnetic compatibility by a third party.

Datasheets and mounting instructions of the components in combination with the planned product must be carefully read and followed.

* The remaining 3.9 m admissible to reach the maximal run length with one feed-in can be completed by configuring VENUS True Color TV Optics IP67 with the same LED Tape in other lengths.

Cable length on connectors for variants FS and BS is 190 mm; LS is 120 mm.
 For Cable / Connector configuration options 00 and 01 the existing connector(s) are replaced with open-ended cables(s) of 2 m length.

Fixture built to length (not field cuttable): $L = (N \times 62.5 \text{ mm}) + \text{ends}$ (ends vary from 5 mm to 14 mm depending on chosen cable feed and connector configuration); $N = 5 \dots$ (as follows); $L_{\min} = 318 \text{ mm}$; $N_{\max} = 48$; $L_{\max} = 3,014 \text{ mm}$

! To configure the specific luminaire please use the online configurator.

Please note: The orange values are CRI 90 specifications.

^AThe given data are typical values. Due to tolerances of the production process and the electrical components, photometric values and electrical power can vary up to 10%

^BThe T_C-point should be measured in thermal equilibrium according to IEC EN 60598-1.

^CIn case of IP67 products, tolerances in the color temperature can occur.

! Note: -40% luminous flux at opal and -25% with diffuse cover.

Adjustable Bracket

Description

Use to adjust and fix the angle of fixture. 180 degrees adjusting range. Delivered with axis screw.

Mounting option AMC is not available for Tunable White Luminaires in combination with an 'LD' light engine.

Cable feed options BS and FS can't be combined with mounting option AMC.

Example of application

4. Wall-mounted

Mounting accessories

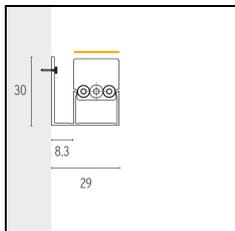

No additional accessories are required for this mounting option

Description

Full length mounting channel, sets light axis parallel to wall.

Calculation refers to the cable configuration on site.

The information listed in the table is only refers to the conductor-based voltage drop of max. 0.85V at 24V DC input voltage.

Regarding the electromagnetic compatibility (EMC) the maximum cable length is defined by the power supply manufacturer.

A cable length between power supply and planned product longer than indicated by the datasheet of the power supply is possible. However the electromagnetic compatibility can then be influenced by the conditions of the installation site. There is no data on electromagnetic compatibility for longer cable lengths, which might lead to the necessity of an evaluation of the electromagnetic compatibility by a third party.

Datasheets and mounting instructions of the components in combination with the planned product must be carefully read and followed.
